Managing Projects with GNU Make Robert Mecklenburg, 2004-11-19 The utility simply known as make is one of the most enduring features of both Unix and other operating systems. First invented in the 1970s, make still turns up to this day as the central engine in most programming projects; it even builds the Linux kernel. In the third edition of the classic *Managing Projects with GNU make*, readers will learn why this utility continues to hold its top position in project build software despite many younger competitors. The premise behind make is simple: after you change source files and want to rebuild your program or other output files, make checks timestamps to see what has changed and rebuilds just what you need without wasting time rebuilding other files. But on top of this simple principle, make layers a rich collection of options that lets you manipulate multiple directories, build different versions of programs for different platforms and customize your builds in other ways. This edition focuses on the GNU version of make which has deservedly become the industry standard. GNU make contains powerful extensions that are explored in this book. It is also popular because it is free software and provides a version for almost every platform, including a version for Microsoft Windows as part of the free Cygwin project. *Managing Projects with GNU make 3rd Edition* provides guidelines on meeting the needs of large, modern projects. Also added are a number of interesting, advanced topics such as portability, parallelism and use with Java. Robert Mecklenburg, author of the third edition, has used make for decades with a variety of platforms and languages. In this book, he zealously lays forth how to get your builds to be as efficient as possible, reduce maintenance, avoid errors and thoroughly understand what make is doing. Chapters on C and Java provide makefile entries optimized for projects in those languages. The author even includes a discussion of the makefile used to build the book.

The GNU Make Book John Graham-Cumming, 2015 Covers GNU Make basics through advanced topics including user

defined functions macros and path handling creating makefile assertions and debugging makefiles parallelization automatic dependency generation rebuilding targets and non recursive Make and using the GNU Make Standard Library *The LaTeX Companion* Frank Mittelbach, Michel Goossens, Johannes Braams, Chris Rowley, 2004 Written by the core LaTeX developers and maintainers this essential reference contains more than 900 self contained ready to run examples that can immediately be reused by readers
