Data Simplification Jules J. Berman, 2016-03-10 Data Simplification Taming Information With Open Source Tools addresses the simple fact that modern data is too big and complex to analyze in its native form Data simplification is the process whereby large and complex data is rendered usable Complex data must be simplified before it can be analyzed but the process of data simplification is anything but simple requiring a specialized set of skills and tools This book provides data scientists from every scientific discipline with the methods and tools to simplify their data for immediate analysis or long term storage in a form that can be readily repurposed or integrated with other data Drawing upon years of practical experience and using numerous examples and use cases Jules Berman discusses the principles methods and tools that must be studied and mastered to achieve data simplification open

source tools free utilities and snippets of code that can be reused and repurposed to simplify data natural language processing and machine translation as a tool to simplify data and data summarization and visualization and the role they play in making data useful for the end user Discusses data simplification principles methods and tools that must be studied and mastered Provides open source tools free utilities and snippets of code that can be reused and repurposed to simplify data Explains how to best utilize indexes to search retrieve and analyze textual data Shows the data scientist how to apply ontologies classifications classes properties and instances to data using tried and true methods

Data Analysis with Open Source Tools Philipp K. Janert, 2010-11-11 Collecting data is relatively easy but turning raw information into something useful requires that you know how to extract precisely what you need With this insightful book intermediate to experienced programmers interested in data analysis will learn techniques for working with data in a business environment You ll learn how to look at data to discover what it contains how to capture those ideas in conceptual models and then feed your understanding back into the organization through business plans metrics dashboards and other applications Along the way you ll experiment with concepts through hands on workshops at the end of each chapter Above all you ll learn how to think about the results you want to achieve rather than rely on tools to think for you Use graphics to describe data with one two or dozens of variables Develop conceptual models using back of the envelope calculations as well as scaling and probability arguments Mine data with computationally intensive methods such as simulation and clustering Make your conclusions understandable through reports dashboards and other metrics programs Understand financial calculations including the time value of money Use dimensionality reduction techniques or predictive analytics to conquer challenging data analysis situations Become familiar with different open source programming environments for data analysis Finally a concise reference for understanding how to conquer piles of data Austin King Senior Web Developer Mozilla An indispensable text for aspiring data scientists Michael E Driscoll CEO Founder Dataspora

Benchmarking Transaction and Analytical Processing Systems Anja Bog,2013-07-11 Systems for Online Transaction Processing OLTP and Online Analytical Processing OLAP are currently separate The potential of the latest technologies and changes in operational and analytical applications over the last decade have given rise to the unification of these systems which can be of benefit for both workloads Research and industry have reacted and prototypes of hybrid database systems are now appearing Benchmarks are the standard method for evaluating comparing and supporting the development of new database systems Because of the separation of OLTP and OLAP systems existing benchmarks are only focused on one or the other With the rise of hybrid database systems benchmarks to assess these systems will be needed as well Based on the examination of existing benchmarks a new benchmark for hybrid database systems is introduced in this book It is furthermore used to determine the effect of adding OLAP to an OLTP workload and is applied to analyze the impact of typically used optimizations in the historically separate OLTP and OLAP domains in mixed workload scenarios

Repurposing Legacy Data Jules J. Berman,2015-03-13 Repurposing Legacy Data Innovative Case Studies takes a look at how data scientists have re purposed legacy data whether their own or legacy data that has been donated to the public domain Most of the data stored worldwide is legacy data data created some time in the past for a particular purpose and left

in obsolete formats As with keepsakes in an attic we retain this information thinking it may have value in the future though we have no current use for it The case studies in this book from such diverse fields as cosmology quantum physics high energy physics microbiology psychiatry medicine and hospital administration all serve to demonstrate how innovative people draw value from legacy data By following the case examples readers will learn how legacy data is restored merged and analyzed for purposes that were never imagined by the original data creators Discusses how combining existing data with other data sets of the same kind can produce an aggregate data set that serves to answer questions that could not be answered with any of the original data Presents a method for re analyzing original data sets using alternate or improved methods that can provide outcomes more precise and reliable than those produced in the original analysis Explains how to integrate heterogeneous data sets for the purpose of answering questions or developing concepts that span several different scientific fields Fundamentals of Stream Processing Henrique C. M. Andrade,Buğra Gedik,Deepak S. Turaga,2014-02-13

This book teaches fundamentals of stream processing covering application design distributed systems infrastructure and continuous analytic algorithms **Logic and Critical Thinking in the Biomedical Sciences** Jules J. Berman,2020-07-08 All too often individuals engaged in the biomedical sciences assume that numeric data must be left to the proper authorities e g statisticians and data analysts who are trained to apply sophisticated mathematical algorithms to sets of data This is a terrible mistake Individuals with keen observational skills regardless of their mathematical training are in the best position to draw correct inferences from their own data and to guide the subsequent implementation of robust mathematical analyses Volume 2 of Logic and Critical Thinking in the Biomedical Sciences provides readers with a repertoire of deductive non mathematical methods that will help them draw useful inferences from their own data Volumes 1 and 2 of Logic and Critical Thinking in the Biomedical Sciences are written for biomedical scientists and college level students engaged in any of the life sciences including bioinformatics and related data sciences Demonstrates that a great deal can be deduced from quantitative data without applying any statistical or mathematical analyses Provides readers with simple techniques for quickly reviewing and finding important relationships hidden within large and complex sets of data Using examples drawn from the biomedical literature discusses common pitfalls in data interpretation and how they can be avoided **Computational Physics - A**

Numerical Methods for the Life Scientist Heino Prinz,2011-08-06

Enzyme kinetics binding kinetics and pharmacological dose response curves are currently analyzed by a few standard methods Some of these like Michaelis Menten enzyme kinetics use plausible approximations others like Hill equations for dose response curves are outdated Calculating realistic reaction schemes requires numerical mathematical routines which usually are not covered in the curricula of life science This textbook will give a step by step introduction to numerical solutions of non linear and differential equations It will be accompanied with a set of programs to calculate any reaction scheme on any personal computer Typical examples from analytical biochemistry

and pharmacology can be used as versatile templates When a reaction scheme is applied for data fitting the resulting parameters may not be unique Correlation of parameters will be discussed and simplification strategies will be offered

Temirbekovich Zunnunov, 2024-12-02 The book is aimed at developing and analyzing fundamentally new mathematical models of dynamic processes in the Earth's geospheres taking into account heredity in order to detect predict natural and man-made threats. It is known that many natural technical and social systems are characterized by the property of heredity or memory when the actual dynamic characteristics of the system are determined by its entire prehistory. Mathematical formalization of such properties in mathematical models is usually ensured by the introduction of integral terms memory functionals with difference kernels. Therefore taking into account the effects of heredity in dynamic processes and systems also determines the relevance of the study. The topic is devoted to the study of various dynamic processes in geospheres using mathematical modeling. Dynamic processes discussed in the book: geomagnetic dynamo geoaoustic emission microseismic vibrations deformation processes solar activity seismic activity processes of transfer and accumulation of radon concentration. The book was the first to examine some dynamic processes that have hereditary effects. Research methods are based on the following sections of mathematics: mathematical and functional analysis equations of mathematical physics differential equations and their systems integro-differential equations fractional calculus vector analysis computational mathematics numerical methods. Also methods of object-oriented programming parallel programming. It should be noted that the research used the principle of the model algorithm program triad. Therefore one of the chapters of the book is devoted to computational algorithms with the possibility of parallelization. The reader will become familiar with new models of geodynamic processes with heredity and approaches to their study. The presented numerical algorithms can be reproduced or applied to others similar processes. The book will provide comprehensive information about the processes being studied and methods of their research. All necessary references will be provided including those defining the current state of affairs in this issue.
