Group Sequential and Confirmatory Adaptive Designs in Clinical Trials Gernot Wassmer, Werner Brannath, 2025-10-14 This book provides an up to date review of the general principles and techniques of confirmatory adaptive designs a generalization of group sequential designs With these designs interim analyses are performed in order to stop a trial prematurely under control of the Type I error rate In adaptive designs it is also permissible to perform a data driven change of relevant aspects of the study design at interim stages This includes for example a sample size reassessment a treatment arm selection or a selection of a pre specified sub population First introduced in the 1990s this popular adaptive methodology has become the focus of intense discussion and is still a rapidly growing field of statistical research The book describes adaptive design methodology at an elementary level while also considering design and planning issues It also looks at methods for analyzing an adaptively planned trial such as estimation methods and methods for determining an overall p value Part I provides the group sequential preliminaries required to understand and apply the adaptive design methodology supplied in Parts II and III Many examples are included that illustrate the practical applications of the techniques An overview of recent developments is given and new to this edition detailed descriptions of the R commands used for the calculations are provided The R package rpact which is available on CRAN allows for the recalculation of most tables and results presented in the monograph The required knowledge of R has been kept to a minimum and an online Shiny app has been made available for rpact Primarily written for applied statisticians from academia and industry who are interested in confirmatory adaptive designs the text is also suitable for an advanced statistical course for applied statisticians or clinicians with a sound statistical background [Adaptive Design Methods in Clinical Trials](#) Shein-Chung Chow, Mark

Chang, 2011-12-01 With new statistical and scientific issues arising in adaptive clinical trial design including the US FDA's recent draft guidance a new edition of one of the first books on the topic is needed Adaptive Design Methods in Clinical Trials Second Edition reflects recent developments and regulatory positions on the use of adaptive designs in clinical trials *Adaptive Design Theory and Implementation Using SAS and R* Mark Chang, 2014-12-01 Get Up to Speed on Many Types of Adaptive

Designs Since the publication of the first edition there have been remarkable advances in the methodology and application of adaptive trials Incorporating many of these new developments Adaptive Design Theory and Implementation Using SAS and R Second Edition offers a detailed framework to understand the

Practical Considerations for Adaptive Trial Design and Implementation Weili He, José Pinheiro, Olga M. Kuznetsova, 2014-10-15 This edited volume is a definitive text on adaptive clinical trial designs from creation and customization to utilization As this book covers the full spectrum of topics involved in the adaptive designs arena it will serve as a valuable reference for researchers working in industry government and academia The target audience is anyone involved in the planning and execution of clinical trials in particular statisticians clinicians pharmacometricians clinical operation specialists drug supply managers and infrastructure providers In spite of the increased efficiency of adaptive trials in saving costs and time ultimately getting drugs to patients sooner their adoption in clinical development is still relatively low One of the chief reasons is the higher complexity of adaptive design trials as compared to traditional trials Barriers to the use of clinical trials with adaptive features include the concerns about the integrity of study design and conduct the risk of regulatory non acceptance the need for an advanced infrastructure for complex randomization and clinical supply scenarios change management for process and behavior modifications extensive resource requirements for the planning and design of adaptive trials and the potential to relegate key decision makings to outside entities There have been limited publications that address these practical considerations and recommend best practices and solutions This book fills this publication gap providing guidance on practical considerations for adaptive trial design and implementation The book comprises three parts Part I focuses on practical considerations from a design perspective whereas Part II delineates practical considerations related to the implementation of adaptive trials Putting it all together Part III presents four illustrative case studies ranging from description and discussion of specific adaptive trial design considerations to the logistic and regulatory issues faced in trial implementation Bringing together the expertise of leading key opinion leaders from pharmaceutical industry academia and regulatory agencies this book provides a balanced and comprehensive coverage of practical considerations for adaptive trial design and implementation

Modern Adaptive Randomized Clinical Trials Oleksandr Sverdlov, 2015-06-30 Is adaptive randomization always better than traditional fixed schedule randomization Which procedures should be used and under which circumstances What special considerations are required for adaptive randomized trials What kind of statistical inference should be used to achieve valid and unbiased treatment comparisons following adaptive random

Adaptive Designs for Sequential Treatment Allocation Alessandro Baldi Antognini, Alessandra

Giovagnoli,2015-04-06 Adaptive Designs for Sequential Treatment Allocation presents a rigorous theoretical treatment of the results and mathematical foundation of adaptive design theory The book focuses on designing sequential randomized experiments to compare two or more treatments incorporating information accrued along the way The authors first introduce the terminology and statistical models most commonly used in comparative experiments They then illustrate biased coin and urn designs that only take into account past treatment allocations as well as designs that use past data such as sequential maximum likelihood and various types of doubly adaptive designs The book also covers multipurpose adaptive experiments involving utilitarian choices and ethical issues It ends with adaptive methods that include covariates in the design The appendices present basic tools of optimal design theory and address Bayesian adaptive designs This book helps readers fully understand the theoretical properties behind various adaptive designs Readers are then equipped to choose the best design for their experiment

Handbook of Methods for Designing, Monitoring, and Analyzing Dose-Finding Trials John O'Quigley,Alexia Iasonos,Björn Bornkamp,2017-04-27 Handbook of Methods for Designing Monitoring and Analyzing Dose Finding Trials gives a thorough presentation of state of the art methods for early phase clinical trials The methodology of clinical trials has advanced greatly over the last 20 years and arguably nowhere greater than that of early phase studies The need to accelerate drug development in a rapidly evolving context of targeted therapies immunotherapy combination treatments and complex group structures has provided the stimulus to these advances Typically we deal with very small samples sequential methods that need to be efficient while at the same time adhering to ethical principles due to the involvement of human subjects Statistical inference is difficult since the standard techniques of maximum likelihood do not usually apply as a result of model misspecification and parameter estimates lying on the boundary of the parameter space Bayesian methods play an important part in overcoming these difficulties but nonetheless require special consideration in this particular context The purpose of this handbook is to provide an expanded summary of the field as it stands and also through discussion provide insights into the thinking of leaders in the field as to the potential developments of the years ahead With this goal in mind we present An introduction to the field for graduate students and novices A basis for more established researchers from which to build A collection of material for an advanced course in early phase clinical trials A comprehensive guide to available methodology for practicing statisticians on the design and analysis of dose finding experiments An extensive guide for the multiple comparison and modeling MCP Mod dose finding approach adaptive two stage designs for dose finding as well as dose time response models and multiple testing in the context of confirmatory dose finding studies John O Quigley is a professor of mathematics and research director at the French National Institute for Health and Medical Research based at the Faculty of Mathematics University Pierre and Marie Curie in Paris France He is author of Proportional Hazards Regression and has published extensively in the field of dose finding Alexia Iasonos is an associate attending biostatistician at the Memorial Sloan Kettering Cancer Center in New York She has over one hundred publications

in the leading statistical and clinical journals on the methodology and design of early phase clinical trials Dr Iasonos has wide experience in the actual implementation of model based early phase trials and has given courses in scientific meetings internationally Björn Bornkamp is a statistical methodologist at Novartis in Basel Switzerland researching and implementing dose finding designs in Phase II clinical trials He is one of the co developers of the MCP Mod methodology for dose finding and main author of the DoseFinding R package He has published numerous papers on dose finding nonlinear models and Bayesian statistics and in 2013 won the Royal Statistical Society award for statistical excellence in the pharmaceutical industry
