Renewable energy for agri-food systems: Towards the Sustainable Development Goals and the Paris Agreement International Renewable Energy Agency, Food and Agriculture Organization of the United Nations, 2021-11-03. In 2021 the United Nations Secretary General will convene the Food Systems Summit to advance dialogue and action towards transforming the way the world produces, consumes and thinks about food, guided by the overarching vision of a fairer, more sustainable world. The Secretary General will also convene the High Level Dialogue on Energy (HLDE) to promote the implementation of the energy related goals and targets of the 2030 Agenda for Sustainable Development. Given the inextricable linkages between the energy and agriculture sectors, integrating the nexus perspective within the FSS and the HLDE is crucial to formulate a joint vision of actions to advance the 2030 Agenda for Sustainable Development and the Paris Agreement. In this context, IRENA and FAO have decided to jointly develop a report on the role of renewable energy used in food chain to advance energy and food security as well as climate action towards the achievement of Sustainable Development Goals and the Paris Agreement. While energy has a key enabling role in food system transformation and innovation in agriculture, its current use is unsustainable because of the high dependence on fossil fuels and frequent access to energy in developing countries. The challenge is to disconnect fossil fuel use from food system transformation without hampering food security. The use of renewable energy in food systems offers vast opportunities to address this challenge and help food systems meet their energy needs while advancing rural development while contributing to rural development and climate action.
