Dredging in Coastal Waters D. Eisma, 2005-12-22 The varied use of dredgers has led to the development of a variety of dredger types from small ones appropriate to modest inshore projects to very large sea going dredgers for large scale projects calling for the storage of dredged material within the ship This book which is the first book dedicated to dredging and its environmental impact in the widest sense contains chapters on dredging operations in the Netherlands Belgium the UK Spain the US China and Singapore Additional chapters discuss more general aspects such as dredging techniques monitoring of dredging operations and the prospects of dredging in a changing environment As well as providing information on dredging activities in different areas it gives an insight into the activities and problems environmental or other involved in modern dredging It will be of interest to professionals and students alike

River Basins and Coastal Systems Planning Within the U.S. Army Corps of Engineers National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Ocean Studies Board, Committee to Assess the U.S. Army Corps of Engineers Methods of Analysis and Peer Review for Water Resources Project Planning, Panel on River Basin and Coastal Systems Planning, 2004-08-18 The U S Army Corps of Engineers the Corps has played a large and important role in shaping water resources systems in the United States since Congress first tasked it in 1824 to improve navigation on the Ohio and Mississippi Rivers Since then rivers have been modified for navigation and flood control harbors have been dredged for shipping and coastlines are routinely fortified against erosion and beach loss Recent decades have seen an overall decline in budgets for civil works project construction yet the range of objectives for water resources projects has broadened as society places more value on environmental and recreational benefits Thus the Corps portfolio of water resources projects has changed considerably There is a reduced emphasis on traditional construction projects and an increased focus on maintenance and reoperation of existing projects such as locks dams and levees and on environmental restoration projects An integrated approach to water resources planning at the scale of river basins and coastal systems is widely endorsed by the academic and engineering communities The Corps mission expertise and experience give it immense potential to alter the structure and functioning of the nation s waterways and coasts As might be expected in a large and complex organization answering to a range of public and private demands implementation of these new policies and objectives is neither consistent nor complete River Basins and Coastal Systems Planning within the U S Army Corps of Engineers recommends improvements in the Corps water resource project planning and review process This report compares economic and environmental benefits and costs over a range of time and space scales suggests multiple purpose formulation and evaluation methods and recommends integration of water development plans with other projects in the region
