Meanings of Pain Simon van Rysewyk, 2017-02-07 Although pain is widely recognized by clinicians and researchers as an experience pain is always felt in a patient specific way rather than experienced for what it objectively is making perceived meaning important in the study of pain The book contributors explain why meaning is important in the way that pain is felt and promote the integration of quantitative and qualitative methods to study meanings of pain For the first time in a book the study of the meanings of pain is given the attention it deserves All pain research and medicine inevitably have to negotiate how pain is perceived how meanings of pain can be described within the fabric of a person's life and neurophysiology what factors mediate them how they interact and change over time and how the relationship between patient researcher and clinician might be understood in terms of meaning Though meanings of pain are not intensively studied in contemporary pain research or thoroughly described as part of clinical assessment no pain researcher or clinician can avoid asking questions about how pain is perceived or the types of data and scientific methods relevant in discovering the answers

Cultural Ontology of the Self in Pain Siby K. George, P.G. Jung, 2015-09-18 The mainstream approach to the understanding of pain continues to be governed by the biomedical paradigm and the dualistic Cartesian ontology This Volume brings together essays of scholars of literature philosophy and history on the many enigmatic shades of pain experience mostly from an anti Cartesian perspective of cultural ontology by scholars of literature philosophy and history A section of the essays is devoted to the socio political dimensions of pain in the Indian context The book offers a critical perspective on the reductive conceptions of pain and argue that non substance ontology or cultural ontology supports a more humane and authentic understanding of pain The general ontological features of the self in pain and culturally imbued dimensions of pain experience are thus brought together in a rare blend in this Volume The essays dwell on the importance of understanding what cultural social and political forces outside our control do to our pain experience They show why such understanding is necessary both to humanely deal with pain and to rectify erroneous approaches to pain experience They also explore the thoroughly ambivalent spaces between pain and pleasure and the cathartic and productive dimensions of pain The essays in this Volume investigate pain experiences through the fresh lenses of history gender ethics politics death illness self loss torture shame dispossession and denial

Narrative and Metaphor in Education Michael Hanne, Anna A. Kaal, 2018-12-07 Human beings rely equally on narrative or storytelling and metaphor or analogy for making sense of the world Narrative and Metaphor in Education integrates the two perspectives of narrative and metaphor in educational theory and practice at every level from pre school to lifelong civic education Bringing together outstanding educational researchers the book interweaves for the first time the rich strand of current research about how narrative may be used productively in

Alleviating World Suffering Ronald E. Anderson,2017-03-01 This is the first volume on the subject of the alleviation of world suffering At the same time it is also the first book framing the fields of global socio economic development world health human rights peace studies

sustainability and poverty within the challenge of alleviating suffering and improving quality of life Both international studies and global development have become specialized and fragmented whereas this work assembles all of these development fragments together in order to determine whether common ground exists to make headway in reducing global suffering Leading experts in these various fields of development and suffering have been recruited worldwide to give scholarly assessments of the major human problems and how they can be successfully tackled The Unknown Cities Abeer Elshater, 2016-04-22 This book investigates the many relatively unknown Egyptian cities which research has largely ignored It seeks to enhance the livability of urban areas and stop the processes that turn residents into anti utopians and their cities into dystopias It examines urbanization patterns in what are currently rural or informal settlements It draws on concepts from Western and Arabic thought concerning idealism and utopianism linking anti utopianism with ideas such as loss of hope and residents right to the city It also investigates the epistemology and methodology of urban design using the descriptive analytical approach to evaluate methods of self criticism to address the problems and enhance urban planning and design The literature regarding ten minute neighborhoods is reviewed along with a comparative content analysis of online articles and the resultant principles are tested through site observation It is found that happiness can be promoted by the principle of ten minute pedestrian access to essential services which can viably guide the reformation of urban planning This work recommends that urban planning should be based on the ten minute neighborhood thus improving the future prospects of utopianism in Egypt's unknown cities Recently in the first decade of the twenty first century there was a definite human crisis that emerged in the Egyptian cities at the level of local urban communities which reflects on the whole city and the attached ones The problem seems to be in the transformation of some urban sites in the metropolitan and small cities to become dystopian places regarding the dynamic impact of the anti utopian people The concept of anti utopians stands as an intermediate step between livable cities and dystopian communities through the transformation that occurs due to the lack of strategic plans by the administrators and or the experts with a special mention to the plans for poor people Therefore from our perspective there is an urgent need to say that the majority of Egyptian cities should be declared as domains of humanitarian disasters which are caused by human hazards rather than the natural disasters e g earthquakes volcanoes floods whirlwinds and hurricanes Thus the first headmost city that will announce its failure in the structural and human scene will get the self respect and worlds estimate as well Extreme Hepatic Surgery and Other Strategies Eduardo de Santibañes, Victoria Ardiles, Fernando A. Alvarez, Virginia Cano Busnelli, Martin de Santibañes, 2017-07-26 This book describes the diagnoses staging and management of patients with colorectal liver metastases initially considered unresectable and portrays the different strategies to increase resectability along with their tactics and tricks Colorectal carcinoma is the third most commonly diagnosed cancer in the world and according to recent cancer statistics around 1.23 million patients are diagnosed each year Of these patients approximately 50% will develop liver metastases during the course of their disease

and around 15-25% are found to have stage IV disease at diagnosis. Liver resection has been recognized as the treatment of choice for these patients, offering overall 5-year survival rates of up to 50-60%, and the only hope for cure. However, at diagnosis, only 10-20% of these patients are possibly amenable to surgical resection with curative intent. The possibility to achieve an R0 resection is many times limited by the amount and quality of the future liver remnant (FLR) being posthepatectomy liver failure (PHLF), the most feared and severe complication after major liver resections. With the years, diverse strategies have been developed with the intention to increase resectability by increasing the future liver remnant and/or reducing tumor size, e.g., ALPPS. Along with these techniques, associated surgeries are developed, including multivisceral resections, which broadens even more the resectability for patients.

The Handbook of Applied Communication Research H. Dan O'Hair, Mary John O'Hair, 2020-04-24. An authoritative survey of different contexts, methodologies, and theories of applied communication. The field of Applied Communication Research (ACR) has made substantial progress over the past five decades in studying communication problems and in making contributions to help solve them. Changes in society, human relationships, climate, and the environment, and digital media have presented myriad contexts in which to apply communication theory. The Handbook of Applied Communication Research addresses a wide array of contemporary communication issues, their research implications in various contexts, and the challenges and opportunities for using communication to manage problems. This innovative work brings together the diverse perspectives of a team of notable international scholars from across disciplines. The Handbook of Applied Communication Research includes discussion and analysis spread across two comprehensive volumes. Volume one introduces ACR, explores what is possible in the field, and examines theoretical perspectives: organizational communication, risk and crisis communication, and media, data, design, and technology. The second volume focuses on real-world communication topics such as health and education, communication, legal, ethical, and policy issues, and volunteerism, social justice, and communication activism. Each chapter addresses a specific issue or concern and discusses the choices faced by participants in the communication process. This important contribution to communication research explores how various communication contexts are best approached, addresses balancing scientific findings with social and cultural issues, discusses how and to what extent media can mitigate the effects of adverse events, features original findings from ongoing research programs and original communication models and frameworks, presents the best available research and insights on where current research and best practices should move in the future. A major addition to the body of knowledge in the field, *The Handbook of Applied Communication Research* is an invaluable work for advanced undergraduate students, graduate students, and scholars.

The Oxford Handbook of Compassion Science Emma Seppala, Emiliana Simon-Thomas, Stephanie L. Brown, Monica C. Worline, C. Daryl Cameron, James Robert Doty, 2017. With contributions from well-established scholars as well as young rising stars in the field, this Handbook bridges a wide variety of diverse perspectives, research methodologies, and theory and provides a foundation for this new and rapidly growing field.
