Roger Hindley, Jonathan P.

Seldin, 2008-07-24 Combinatory logic and lambda calculus originally devised in the 1920s have since developed into linguistic tools especially useful in programming languages The authors previous book served as the main reference for introductory courses on lambda calculus for over 20 years this version is thoroughly revised and offers an account of the subject with the same authoritative exposition The grammar and basic properties of both combinatory logic and lambda calculus are discussed followed by an introduction to type theory Typed and untyped versions of the systems and their differences are covered Lambda calculus models which lie behind much of the semantics of programming languages are also explained in depth The treatment is as non technical as possible with the main ideas emphasized and illustrated by examples Many exercises are included from routine to advanced with solutions to most at the end of the book Computer Science - CACIC

Thirty Five Years of Automating Mathematics F.D. Kamareddine, 2013-04-17 THIRTY FIVE YEARS OF AUTOMATING MATHEMATICS DEDICATED TO 35 YEARS OF DE BRUIJN S AUTOMATH N G de Bruijn was a well established mathematician before deciding in 1967 at the age of 49 to work on a new direction related to Automating Mathematics By then his contributions in mathematics were numerous and extremely influential His book on advanced asymptotic methods North Holland 1958 was a classic and was subsequently turned into a book in the well known Dover book series His work on combinatorics yielded influential notions and theorems of which we mention the de Bruijn sequences of 1946 and the de Bruijn Erdos theorem of 1948 De Bruijn s contributions to mathematics also included his work on generalized function theory analytic number theory optimal control quasicrystals the mathematical analysis of games and much more In the 1960s de Bruijn became fascinated by the new computer technology and as a result decided to start the new AUTOMATH project where he could check with the help of the computer the correctness of books of mathematics In each area that de Bruijn approached he shed a new light and was known for his originality and for making deep intellectual contributions And when it came to automating mathematics he again did it his way and introduced the highly influential AUTOMATH In the past decade he has also been working on theories of the human brain

Logical Analysis of Hybrid Systems André Platzer, 2010-09-02 Hybrid systems are models for complex physical systems and have become a widely used concept for understanding their behavior Many applications are safety critical including car railway and air traffic control robotics physical chemical process control and biomedical devices Hybrid systems analysis studies how we can build computerized controllers for physical systems which are guaranteed to meet their design goals The author gives a unique logic based perspective on hybrid systems analysis It is the first book that leverages

the power of logic for hybrid systems The author develops a coherent logical approach for systematic hybrid systems analysis covering its theory practice and applications It is further shown how the developed verification techniques can be used to study air traffic and railway control systems This book is intended for researchers postgraduates and professionals who are interested in hybrid systems analysis cyberphysical or embedded systems design logic and theorem proving or transportation and automation
