Handbook Of Multimedia Information Retrieval:

Handbook of Multimedia Computing Borko Furht, 1998-09-29 Multimedia computing has emerged as a major area of research. Coupled with high speed networks, multimedia computer systems have opened a spectrum of new applications by combining a variety of information sources such as voice, graphics, animation, images, audio, and video. Handbook on Multimedia Computing provides a comprehensive resource on advanced topics in this field, considered here as the integration of four industries: computer, communication, broadcasting, entertainment, and consumer electronics. This indispensable reference compiles contributions from 80 academic and industry leaders examining all the major subsets of multimedia activity. Four parts divide the text. Basic Concepts and Standards introduces basic multimedia terminology, taxonomy, and concepts, including multimedia objects, user interfaces, and standards. Multimedia Retrieval and Processing Techniques addresses various aspects of audio, image, and video retrieval, indexing, and processing techniques and systems. Multimedia Systems and Techniques covers critical multimedia issues such as multimedia synchronization, operating systems for multimedia, multimedia databases, storage organizations, and processor architectures. Multimedia Communications and Networking discusses networking issues such as quality of service, resource management, and video transport. An indispensable reference, Handbook on Multimedia Computing covers every aspect of multimedia applications and technology. It gives you the tools you need to understand and work in this fast-paced, continuously changing field.

Handbook of Internet and Multimedia Systems and Applications Borko Furht, 1998-12-29 Today multimedia applications on the Internet are still in their infancy. They include personalized communications such as Internet telephone and videophone, and interactive applications such as video on demand, videoconferencing, distance learning, collaborative work, digital libraries, radio, and television broadcasting, and others. Handbook of Internet and Multimedia Systems and Applications, a companion to the author's Handbook of Multimedia Computing, probes the development of systems supporting Internet and multimedia applications. Part one introduces basic multimedia and Internet concepts, user interfaces, standards, authoring techniques, and tools, and video browsing and retrieval techniques. Part two covers multimedia and communications systems, including distributed multimedia systems, visual information systems, multimedia messaging and news systems, conference systems, and many others. Part three presents contemporary Internet and multimedia applications, including multimedia education, interactive movies, multimedia document systems, multimedia broadcasting over the Internet, and mobile multimedia.

Handbook of Multimedia Information Retrieval Horst Eidenberger, 2012 Multimedia information retrieval. That is the desire to make computers see, hear, and understand like humans do. Is it possible to give perception to machines to make them understand facial expressions, hummed melodies, stock charts, and ECG curves? If yes, the computer would become an even more valuable companion in business and private life. Think of the possibilities: in for example healthcare, home security, online customer support, or market analysis. This book explains what is possible in multimedia information retrieval today, and

what is not We introduce the basic concepts explain why the first step is always summarization and the second classification which is essentially applying human understanding of some context on the summary We group and discuss the various methods that have been proposed for the summarization of audio visual and other media information In classification we build on today s psychological understanding of human cognition Successfully we transfer concepts of human similarity perception on machine classification We cluster machine learning methods by their approach model and process On top of that we link back from the state of the art methods of multimedia information retrieval to human cognition We propose artificial neural structures for the building blocks of media summarization and classification The result is a balanced introduction into the field that starts from graduate IT knowledge and ends at the current frontiers of multimedia research

The Handbook of Multimedia Information Management William I. Grosky,Ramesh Jain,Rajiv Mehrotra,1997 **The Practical Handbook of Internet Computing** Munindar P. for multimedia digital data This book serves to bridge the gap between classic ranking of text documents and modern information retrieval where composite multimedia documents are searched for relevant information Multimedia Information Retrieval Content Based Information Retrieval from Large Text and Audio Databases begins to pave the way for speech retrieval only recently has the search for information in speech recordings become feasible This book provides the necessary introduction to speech recognition while discussing probabilistic retrieval and text retrieval key topics in classic information retrieval The book then discusses speech retrieval which is even more challenging than retrieving text documents because word boundaries are difficult to detect and recognition errors affect the retrieval effectiveness This book also addresses the problem of integrating information retrieval and database functions since there is an increasing need for retrieving information from frequently changing data collections which are organized and managed by a database system Multimedia Information Retrieval Content Based Information Retrieval from Large Text and Audio Databases serves as an excellent reference source and may be used as a text for advanced courses on the topic
