Nondestructive Evaluation of Wood Forest Service (U S), Forest Products Laboratory (U S), Robert J. Ross, 2015. Nature's engineering of wood through genetics, wind and weather creates a wide variability in wood as a material. Consequently, manufacture and users of wood products are frequently frustrated in dealing with the forest resource. Manufacturers sometimes argue that wood is difficult to consistently process into quality products because of the wide range of properties that exist in this raw material. Users of wood products can be equally frustrated with the performance variability found in finished products. Nondestructive evaluation (NDE) technologies have contributed significantly toward eliminating the cause of these frustrations. NDE technologies have been developed and are currently used in lumber and veneer grading programs that result in engineered materials that have consistent, well-defined performance characteristics. This brief volume explores some of the processes that are used to manufacture wood, including green wood technology, and provides a bit of history to wood production and its uses too. Nondestructive Testing and Evaluation of Fiber-Reinforced Composite Structures Shuncong Zhong, Walter Nsengiyumva, 2022-04-01. This book presents a detailed description of the most common nondestructive testing (NDT) techniques used for the testing and evaluation of fiber-reinforced composite structures during manufacturing and/or in service stages. In order to facilitate the understanding and the utility of the different NDT techniques presented, the book first provides some information regarding the defects and material degradation mechanisms observed in fiber-reinforced composite structures, as well as their general description and

most probable causes It is written based on the extensive scientific research and engineering backgrounds of the authors in the NDT and structural health monitoring SHM of structural systems from various areas including electrical mechanical materials civil and biomedical engineering Pursuing a rigorous approach the book establishes a fundamental framework for the NDT of fiber reinforced composite structures while emphasizing on the importance of technique s spatial resolution integrated systems analysis and the significance of the influence stemming from the applicability of the NDT and the physical parameters of the test structures in the selection and utilization of adequate NDT techniques The book is intended for students who are interested in the NDT of fiber reinforced composite structures researchers investigating the applicability of different NDT techniques to the inspections of structural systems and NDT researchers and engineers working on the optimization of NDT systems for specific applications involving the use of fiber reinforced composite structures
