Handbook Of Imaging In Biological Mechanics:

Approximate Analytical Methods for Solving Ordinary Differential Equations T.S.L Radhika, T. K.V. Iyengar, T. Raja Rani, 2014-10-31 *Approximate Analytical Methods for Solving Ordinary Differential Equations* ODEs is the first book to present all of the available approximate methods for solving ODEs eliminating the need to wade through multiple books and articles. It covers both well established techniques and recently developed procedures including the classical series solution method, diverse perturbation methods, pioneering asymptotic methods and the latest homotopy methods. The book is suitable not only for mathematicians and engineers but also for biologists, physicists and economists. It gives a complete description of the methods without going deep into rigorous mathematical aspects. Detailed examples illustrate the application of the methods to solve real world problems. The authors introduce the classical power series method for solving differential equations before moving on to asymptotic methods. They next show how perturbation methods are used to understand physical phenomena whose mathematical formulation involves a perturbation parameter and explain how the multiple scale technique solves problems whose solution cannot be completely described on a single timescale. They then describe the Wentzel-Kramers and Brillouin-WKB method that helps solve both problems that oscillate rapidly and problems that have a sudden change in the behavior of the solution function at a point in the interval. The book concludes with recent nonperturbation methods that provide solutions to a much wider class of problems and recent analytical methods based on the concept of homotopy of topology.

Computational Biomechanics for Medicine Barry Doyle, Karol Miller, Adam Wittek, Poul M.F. Nielsen, 2015-04-25 The *Computational Biomechanics for Medicine* titles provide an opportunity for specialists in computational biomechanics to present their latest methodologies and advancements. This volume comprises twelve of the newest approaches and applications of computational biomechanics from researchers in Australia, New Zealand, USA, France, Spain and Switzerland. Some of the interesting topics discussed are real time simulations, growth and remodelling of soft tissues, inverse and meshless solutions, medical image analysis and patient specific solid mechanics simulations. One of the greatest challenges facing the computational engineering community is to extend the success of computational mechanics to fields outside traditional engineering, in particular to biology, the biomedical sciences and medicine. We hope the research presented within this book series will contribute to overcoming this grand challenge.

Innovative Developments in Multi-Modality Elastography Simon Chatelin, Javier Brum, Philippe Garteiser, Jean-Luc Gennisson, Jing Guo, Najat Salameh, 2022-11-23 *Mechanobiology* Simon C. F. Molecular and Cellular Mechanobiology Shu Chien, Adam J. Engler, Peter Yingxiao Wang, 2016-08-10
 This book will cover the cutting edge developments in molecular and cellular mechanobiology to date. Readers will have a clear understanding of mechanobiology at the molecular and cellular levels encompassing the mechanosensors, transducers, and transcription. An integrative approach across different scales from molecular sensing to mechanotransduction and gene modulation for physiological regulation of cellular functions will be explored, as well as applications to pathophysiological states in disease. A comprehensive understanding of the roles of physicochemical microenvironment and intracellular responses in determining cellular function in health and disease will also be discussed.

Collagen Biografts for Tunable Drug Delivery Rucha Joshi, 2021-01-31
 This book reviews collagen-based biomaterials that have been applied broadly to tissue engineering and local drug delivery applications and lays out a landscape for developing a multifunctional biograft material from collagen polymers. The book also discusses current shortcomings in collagen-based drug delivery opportunities, including poor mechanical properties, rapid proteolytic degradation, and cursory control over physical properties and molecular release profiles. Finally, a review of application of the collagen biograft materials for promoting neovascularization and tissue regeneration is presented using examples of established in vivo chicken egg chorioallantoic membrane (CAM) model. Use of heparin for affinity-based vascular endothelial growth factor (VEGF) retention in collagen constructs is also discussed for promoting neovascularization. Reviews state-of-the-art strategies for drug incorporation and retention in collagen. Covers collagen-based material applications for improving vascularization and tissue regeneration. Illustrates how to tailor collagen architecture for soft tissue engineering and controlled drug delivery.

Advances in Digital Image Correlation (DIC) Jean-Noël Périé, Jean-Charles Passieux, 2020-04-21 Digital image correlation DIC has become the most popular full field measurement technique in experimental mechanics It is a versatile and inexpensive measurement method that provides a large amount of experimental data Because DIC takes advantage of a huge variety of image modalities the technique allows covering a wide range of space and time scales Stereo extends the scope of DIC to non planar cases which are more representative of industrial use cases With the development of tomography digital volume correlation now provides access to volumetric data enabling the study of the inner behavior of materials and structures However the use of DIC data to quantitatively validate models or accurately identify a set of constitutive parameters remains challenging One of the reasons lies in the compromises between measurement resolution and spatial resolution Second the question of the boundary conditions is still open Another reason is that the measured displacements are not directly comparable with usual simulations Finally the use of full field data leads to new computational challenges
