Critical Issues in Mathematics Education Philip Clarkson, Norma C. Presmeg, 2008-09-22. Critical Issues in Mathematics Education presents the significant contributions of Professor Alan Bishop within the mathematics education research community. Six critical issues, each of which have had paramount importance in the development of mathematics education research, are reviewed and include a discussion of current developments in each area: Teacher decision making, spatial visualizing, geometry, teachers and research, cultural, social aspects of mathematics education, sociopolitical issues and values. These serve as the basic issues discussed in this examination of mathematics education over the last fifty years, during which Professor Bishop has been active in the field. A comprehensive discussion of each of these topics is realized by offering the reader a classic research contribution of Professor Bishop's together with commentary and invited chapters from leading experts in the field of mathematics education. Critical Issues in Mathematics Education will make an invaluable contribution to the ongoing reflection of mathematics education researchers worldwide but also to policy makers and teacher educators who wish to understand some of the key issues with which mathematics education has been and still is concerned and the context within which Professor Bishop's key contributions to these research issues were made. *Proof and Proving in Mathematics Education* Gila Hanna, Michael de Villiers, 2012-06-14. THIS BOOK IS AVAILABLE AS OPEN ACCESS BOOK ON SPRINGERLINK. One of the most significant tasks facing mathematics educators is to understand the role of mathematical reasoning and proving in mathematics teaching so that its presence in instruction can be enhanced. This challenge has been given even greater importance by the assignment to proof of a more prominent place in the mathematics curriculum at all levels. Along with this renewed emphasis, there has been an upsurge in research on the teaching and learning of proof at all grade levels, leading to a re-examination of the role of proof in the curriculum and of its relation to other forms of explanation, illustration and justification. This book, resulting from the 19th ICMI Study, brings together a variety of viewpoints on issues such as: The potential role of reasoning and proof in deepening mathematical understanding in the classroom as it does in mathematical practice; The developmental nature of mathematical reasoning and proof in teaching and learning from the earliest grades; The development of suitable curriculum materials and teacher education programs to support the teaching of proof and proving; The book considers proof and proving as complex but foundational in mathematics. Through the systematic examination of recent research, this volume offers new ideas aimed at enhancing the place of proof and proving in our

classrooms Third International Handbook of Mathematics Education M.A. (Ken) Clements, Alan Bishop, Christine Keitel-Kreidt, Jeremy Kilpatrick, Frederick Koon-Shing Leung, 2012-11-15 The four sections in this Third International Handbook are concerned with a social political and cultural dimensions in mathematics education b mathematics education as a field of study c technology in the mathematics curriculum and d international perspectives on mathematics education These themes are taken up by 84 internationally recognized scholars based in 26 different nations Each of section is structured on the basis of past present and future aspects The first chapter in a section provides historical perspectives How did we get to where we are now the middle chapters in a section analyze present day key issues and themes Where are we now and what recent events have been especially significant and the final chapter in a section reflects on policy matters Where are we going and what should we do Readership Teachers mathematics educators ed policy makers mathematicians graduate students undergraduate students Large set of authoritative international authors **Learning Through Teaching Mathematics** Roza Leikin, Rina Zazkis, 2010-04-10 The idea of teachers Learning through Teaching LTT when presented to a na ve bystander appears as an oxymoron Are we not supposed to learn before we teach After all under the usual circumstances learning is the task for those who are being taught not of those who teach However this book is about the learning of teachers not the learning of students It is an ancient wisdom that the best way to truly learn something is to teach it to others Nevertheless once a teacher has taught a particular topic or concept and consequently truly learned it what is left for this teacher to learn As evident in this book the experience of teaching presents teachers with an exciting opportunity for learning throughout their entire career This means acquiring a better understanding of what is being taught and moreover learning a variety of new things What these new things may be and how they are learned is addressed in the collection of chapters in this volume LTT is acknowledged by multiple researchers and mathematics educators In the rst chapter Leikin and Zazkis review literature that recognizes this phenomenon and stress that only a small number of studies attend systematically to LTT p cesses The authors in this volume purposefully analyze the teaching of mathematics as a source for teachers own learning **The Nature and Development of Mathematics** John Adams, Patrick Barmby, Alex Mesoudi, 2017-04-21 From an infant s first grasp of quantity to Einstein s theory of relativity the human experience of number has intrigued researchers for centuries Numeracy and mathematics have played fundamental roles in the development of societies and civilisations and yet there is an essential mystery to these concepts evidenced by the fear many people still feel when confronted by apparently simple sums Including perspectives from anthropology education and psychology The Nature and Development of Mathematics addresses three core questions Is maths natural What is the impact of our culture and environment on mathematical thinking And how can we improve our mathematical ability Examining the cognitive processes that we use the origins of these skills and their cultural context and how learning and teaching can be supported in the classroom the book contextualises each issue within the wider field arguing that only by taking a cross disciplinary

perspective can we fully understand what it means to be numerate as well as how we become numerate in our modern world This is a unique collection including contributions from a range of renowned international researchers It will be of interest to students and researchers across cognitive psychology cultural anthropology and educational research

Mathematical Knowledge in Teaching Tim Rowland, Kenneth Ruthven, 2011-01-06 The quality of primary and secondary school mathematics teaching is generally agreed to depend crucially on the subject related knowledge of the teacher However there is increasing recognition that effective teaching calls for distinctive forms of subject related knowledge and thinking Thus established ways of conceptualizing developing and assessing mathematical knowledge for teaching may be less than adequate These are important issues for policy and practice because of longstanding difficulties in recruiting teachers who are confident and conventionally well qualified in mathematics and because of rising concern that teaching of the subject has not adapted sufficiently The issues to be examined in Mathematical Knowledge in Teaching are of considerable significance in addressing global aspirations to raise standards of teaching and learning in mathematics by developing more effective approaches to characterizing assessing and developing mathematical knowledge for teaching
