Simon, 2012-12-06 We respect Herbert A Simon as an established leader of empirical and logical analysis in the human sciences while we happily think of him as also the loner of course he works with many colleagues but none can match him He has been writing fruitfully and steadily for four decades in many fields among them psychology logic decision theory economics computer science management production engineering information and control theory operations research confirmation theory and we must have omitted several With all of them he is at once the technical scientist and the philosophical critic and analyst When writing of decisions and actions he is at the interface of

philosophy of science decision theory philosophy of the specific social sciences and inventory theory itself for him at the interface of economic theory production engineering and information theory When writing on causality he is at the interface of methodology metaphysics logic and philosophy of physics systems theory and so on Not that the interdisciplinary is his orthodoxy we are delighted that he has chosen to include in this book both his early and little appreciated treatment of straightforward philosophy of physics the axioms of Newtonian mechanics and also his fine papers on pure confirmation theory Stories of the great scientists Henrietta Christian Wright,1889 **Catholic World** ,1904 **Creative Learning for the Information Age** Lyn Lesch,2014-05-21 Creative Learning for the Information Age How Classrooms Can Better Prepare Students second edition examines how students in their formative years can learn in a more creative manner and can become successful in an age in which knowledge travels so rapidly and is transformed so quickly This book sets forth several solutions such as new skills that allow students to perceive important relationships and connections within various subject matters a different type of accountability that is integrally tied to student initiative and a different learning structure that allows teacher and student to work together to develop subject matter which is more fully connected to the world of professional expertise Lyn Lesch also assesses certain barriers which may stand in the way of students learning more creatively in our current information age In particular he draws attention to an emphasis on standardized testing and the introduction of national core standards both of which significantly restrict the field of various subject matters and thereby restrict creative thinking and learning and the potential dulling of young people s inner lives along with a potentially distracted awareness being engendered in them by the technologies of our current digital age *The Concept of Creativity in Science and Art* D. Dutton,M. Krausz,2012-12-06 This third volume of American University Publications in Philosophy continues the tradition of presenting books in the series shaping current frontiers and new directions in philosophical reflection In a period emerging from the neglect of creativity by positivism Professors Dutton and Krausz and their eminent colleagues included in the collection challenge modern philosophy to explore the concept of creativity in both scientific inquiry and artistic production In view of the fact that Professor Krausz served at one time as Visiting Professor of Philosophy at The American University we are especially pleased to include this volume in the series HAROLD A DURFEE for the editors of American University Publications in Philosophy EDITORS PREFACE While the literature on the psychology of creativity is substantial surprisingly little attention has been paid to the subject by philosophers in recent years This fact is no doubt owed in part to the legacy of positivism whose tenets have included a sharp distinction between what Hans Reichenbach called the context of discovery and the context of justification Philosophy in this view must address itself to the logic of justifying hypotheses little of philosophical importance can be said about the more creative business of discovering them That positivism has held is no more than a merely psychological question since there is no logic of discovery or creation there can be no philosophical reconstruction of it **The Greatest Works of Upton Sinclair** Upton Sinclair,2022-12-10 Upton

Sinclair's *The Greatest Works of Upton Sinclair* is a compelling anthology that showcases the author's pivotal role in early 20th century American literature and social commentary. Spanning a variety of genres including social realism, journalism, and fiction, this collection encompasses notable works such as *The Jungle*, which exposes the brutal conditions of the meatpacking industry, and *Oil*, a sharp critique of American capitalism and greed. Sinclair's writing style is characterized by vivid imagery and a straightforward narrative reflecting both the industrial pace of the era and a deep moral urgency that calls for social activism. Each piece is a lens into the darker sides of American society, urging readers to confront uncomfortable truths about labor exploitation and reform movements of the time.

Upton Sinclair (1878–1968) was a tireless advocate for social justice, influenced by his upbringing in a working-class family. His experiences witnessing poverty and exploitation in urban America fueled his commitment to exposing societal injustices. With a journalistic background, Sinclair combined fiction and factual observation effectively, prompting public discourse on labor rights and economic reform. His staunch advocacy for socialism and criticism of capitalist practices positioned him as a controversial yet essential figure in American letters. This anthology is not merely an academic collection but an essential reading for anyone interested in the historical and ethical underpinnings of modern America. Sinclair's potent prose not only entertains but also educates, making it pivotal for understanding contemporary issues of inequality and corporate power. Readers seeking both literary and moral depth will find in Sinclair's works a call to action that resonates with today's socio-political climate.

[The Idea of Creativity](#) Karen Bardsley, Denis Dutton, Michael Krausz, 2009-03-25

Seventeen philosophers, scientists, and artists consider questions about the intriguing idea of creativity. Is creativity essentially mysterious? Is creativity essentially inspirational or rationalistic? What role does skill play in creativity? What are the criteria of creativity? Should we assign logical priority to creative persons, creative processes, or creative products? How do forms of creativity relate to different domains of human activity? How does creativity relate to self-transformation? How does our knowledge of the circumstances of creativity affect our appreciation of its products? Can a recipient of a creative work also be a creator of it? Contributors include Margaret Boden, Larry Briskman, John M. Carvalho, David Davies, Berys Gaut, Rom Harré, Carl R. Hausman, Albert Hofstadter, Arthur Koestler, Michael Krausz, Peter Lamarque, Thomas Leddy, Paisley Livingston, Michael Polanyi, Dean Keith Simonton, and Francis Sparshott.
