Green Logistics Improving The Environmental Sustainability Of Logistics:

Green Logistics Alan McKinnon, Michael Browne, Anthony Whiteing, Maja Piecyk, 2015-02-03 Leading the way in current thinking on environmental logistics Green Logistics provides a unique insight on the environmental impacts of logistics and the actions that companies and governments can take to deal with them It is written by leading researchers in the field and provides a comprehensive view of the subject for students managers and policy makers Fully updated the 3rd edition of Green Logistics has a more global perspective than previous editions It introduces new contributors and international case studies that illustrate the impact of green logistics in practice There is a new chapter on the links between green logistics and corporate social responsibility and a series of postscripts examining the effects of new developments such as 3D printing distribution by drone the physical internet and the concept of peak freight Other key topics examined include carbon auditing of supply chains transferring freight to greener transport modes reducing the environmental impact of warehousing improving the energy efficiency of freight transport making city logistics more environmentally sustainable reverse logistics for the management of waste role of government in promoting sustainable logistics The 3rd edition of Green Logistics includes indispensable online supporting materials including graphics tables chapter summaries and guidelines for lecturers

Green Logistics Alan McKinnon, Michael Browne, Anthony Whiteing, 2012-12-03 As concern for the environment rises companies must take more account of the external costs of logistics associated mainly with climate change air pollution noise vibration and accidents Green Logistics analyzes the environmental consequences of logistics and how to deal with them Written by a leading team of logistics academics the book examines ways of reducing these externalities and achieving a more sustainable balance between economic environmental and social objectives It examines key areas in this important subject including carbon auditing of supply chains transferring freight to greener transport modes reducing the environmental impact of warehousing improving fuel efficiency in freight transport reverse logistics for the management of waste The new edition is completely updated throughout with new methodologies and case studies to illustrate the impact of green logistics in practice *Green Logistics* Alan C. McKinnon, 2010 Green Logistics analyzes the environmental consequences of logistics and how to redress them Written by a leading team of logistics academics this work examines ways of achieving a more sustainable balance between economic environmental and social objectives *Sustainable Supply Chain Management* Balkan Cetinkaya, Richard Cuthbertson, Graham Ewer, Thorsten Klaas-Wissing, Wojciech Piotrowicz, Christoph Tyssen, 2011-01-27 This book focuses on the need to develop sustainable supply chains economically environmentally and socially This book is not about a wish list of impractical choices but the reality of decisions faced by all those involved in supply chain management today Our definition of sustainable supply chains is not restricted to so called green supply chains but recognises that in order to be truly sustainable supply chains must operate within a realistic financial structure as well as contribute value to our society Supply chains are not sustainable unless they are realistically funded and valued Thus a real

definition of sustainable supply chain management must take account of all relevant economic social and environmental issues This book contains examples from a wide range of real life case studies and synthesizes the learnings from these many different situations to provide the fundamental building blocks at the centre of successful logistics and supply chain management

Exploring Process Management as a Means for Greening Road Freight Transport Priscilla Navarro, 2019-11-18

Research has proven that we need to reduce our environmental impact Sweden has set a goal to become fossil free by 2045 The increasing amount of transport and the need to reduce its environmental effects has put pressure on the companies of the road freight transport sector Therefore this business sector needs research actions to find tools that will assist in the greening of its services and operations My research is a contribution to these efforts from a managerial point of view Process management is a methodology taken from Total Quality Management TQM that has been used in several business sectors to improve business performance Its process orientation and focus on customers allow companies to identify and satisfy the current and latent needs of their customers Until now TQM has targeted customer needs However it is experiencing a shift towards incorporating societal needs into the equation Environmental sustainability is becoming a societal requirement for companies in all sectors Hence the purpose of my research is to explore the possibilities of using process management to support the greening of small and medium sized companies within the road freight transport sector The frame of reference for my study is based on three well established domains in academia and their intersections These domains are process management road freight transport and environmental sustainability I have used qualitative methods for my research Specifically I performed a case study at two medium sized Swedish companies within the road freight transport business sector The data collection methods involved document studies observations and interviews at each case company The case study was performed using an action research approach which involved setting up meetings seminars and workshops with each case company Additionally joint workshops were performed which allowed me to observe and obtain results from the interactions between the companies The analysis is presented for each case separately and then for their interactions The results are compared with the existing literature from the three domains I based my research on three research questions The first was intended to identify the principles and tools within process management that may be applied to road freight transport companies interested in implementing this methodology to enhance their environmental sustainability I concluded that these principles were present in the companies and are needed for the implementation of process management The tools included in this methodology can be associated with environmental initiatives performed by the companies in support of their greening The second research question refers to the benefits and challenges that companies in this business sector may face when implementing process management methodology I conclude that most of the expected benefits of process management were confirmed Additionally a new benefit was observed reducing the environmental effect of their services can interest current customers and attract new customers to road freight transport

companies The challenges identified during the case study include resistance to change lack of knowledge and resource allocation limitations I also confirmed that a stepwise implementation of process management increases the likelihood of the success of the methodology Hence underdeveloped management systems are also a challenge when this methodology is used in freight transport companies The third and final research question involves the adaptations required for process management to enhance environmental sustainability in companies in this business sector I refer to each of the challenges found and suggest certain requirements for the companies to apply this methodology Clear communication from top management the training of employees and the involvement of all employees are some of these requirements Moreover to incorporate the environmental aspects clearly I suggest environmental efforts for each step in the implementation of process management By including these efforts in the process maturity model I conclude that road freight transport companies could use process management as a means of enhancing environmental sustainability Forskning har visat att vi m ste minska v r milj p verkan Sverige har som m ls ttning att vara fossilfritt 2045 Den kade m ngden transporter och behovet av att s nka milj p verkan har en direkt p verkan p godstransportsf retag D rf r beh vs forsknings tg rder riktade mot dessa f r att hitta verktyg som hj lper till att minska milj p verkan av dess verksamhet och tj nster Min forskning r ett bidrag till dessa anstr ngningar ur ett ledningsperspektiv Processledning r en metodik inom Total Quality Management TQM som har anv nts i flera branscher f r att f rb ttra aff rsresultat Processorientering och fokus p kunderna g r att f retag kan identifiera och tillfredsst lla aktuella och latent behov ifr n deras kunder Fram tills idag s har TQM siktat in sig p kundbehov men just nu p g r en f rflyttning inom TQM mot att ven inkludera samh llsbehov i ekvationen Milj m ssig h llbarhet h ller p att bli ett samh lligt krav f r f retag inom alla branscher D rf r r syftet med min forskning att utforska m jligheterna av att anv nda processledning som ett verktyg f r att minska milj p verkan av sm och medelstora f retag inom godstransportbranschen Min studie baseras p tre v letablerade omr den inom akademien och deras verlapp Omr den r processledning godstransporter och milj m ssig h llbarhet Jag har anv nt kvalitativa metoder f r min forskning Specifikt s genomf rdes en fallstudie vid tv medelstora svenska f retag inom godstransportbranschen Dainsamlingsmetoder som anv ndes var dokumentstudier observationer samt interjuver hos b da f retagen Fallstudien genomf rdes med en aktionsforskningsapproach Aktionsforskningen genomf rdes som m ten seminarier och workshops hos varje f retag Dessutom genomf rdes gemensamma workshops med f retagen vilket gjorde det m jligt att observera och f resultat utifr n samspelet mellan f retagen Analysen presenteras f r varje f retag separat och d refter utifr n deras samspel resultaten j mf rs med existerande litteratur ifr n de tre omr dena Min forskning utg r ifr n tre fr gest lningar Syftet med den f rsta var att identifiera principerna och verktygen inom processledning som kan appliceras p godstransportf retag som r intresserade av att implementera metodiken f r att ka sin milj m ssiga h llbarhet Jag drog slutsatsen att principerna fr n processledning fanns inom f retagen och dom beh vs f r implementeringen av processledningen Verktygen inom den h r metodiken kan associeras med milj initiativ utf rda av f retagen och minska deras

Environmental Sustainability in Asian Logistics and Supply Chains Xiaohong Liu, 2018-07-12 This book gathers together invited presentations from the 12th International Congress on Logistics and SCM Systems ICLS2017 held in Beijing China August 20-23 2017 The focus of the ICLS2017 was environmental sustainability in logistics and supply chains particularly in the Asia Pacific region It addressed a variety of themes in the domains of green logistics and supply chain management SCM including green logistics and environmental impact green SCM and business performance green operations and optimization supply chain sustainability carbon management in logistics and green SCM and corporate social responsibility CSR The editors selected high quality presentations from the highly successful symposium and invited the presenters to prepare full chapters for this book in order to disseminate their findings and promote further research collaborations This timely book sheds new light on the theories and practices associated with greening logistics and SCM in Asia

Energy, Transport, & the Environment Oliver Inderwildi, David Anthony King, Sir David King, 2012-03-04 Sustainable mobility is a highly complex problem as it is affected by the interactions between socio economic environmental technological and political issues Energy Transport the Environment Addressing the Sustainable Mobility Paradigm brings together leading figures from business academia and governments to address the challenges and opportunities involved in working towards sustainable mobility Key thinkers and decision makers approach topics and debates including energy security and resource scarcity greenhouse gas and pollutant emissions urban planning transport systems and their management governance and finance of transformation the threats of terrorism and climate change to our transport systems Introduced by a preface from U S Secretary Steven Chu and an outline by the editors Dr Oliver Inderwildi and Sir David King Energy Transport the Environment is divided into six sections These sections address and explore the challenges and opportunities for energy supply road transport urban mobility aviation

sea and rail as well as finance and economics in transport Possible solutions ranging from alternative fuels to advanced urban planning and policy levers will be examined in order to deepen the understanding of currently proposed solutions within the political realities of the dominating economic areas The result of this detailed investigation is an integrated view of sustainable transport for both people and freight making Energy Transport the Environment key reading for researchers decision makers and policy experts across the public and private sectors Mapping Environmental Sustainability

Oreszczyn, Sue, Lane, Andy, 2017-09-06 While there is growing interest in participatory research to address issues around environmental sustainability the focus of analysis tends to be on the results or products of the research rather than the processes involved Addressing this gap the authors draw on their experience of specific mapping techniques based on different systemic concepts and theories that have helped facilitate explore and capture different understandings of the relationships perspectives and boundaries within situations involving environmental sustainability The development of visual mapping techniques is explained and practical case studies describe their application in environmental sustainability projects from working with farmers and their networks to using visual mapping with indigenous communities and managing coastal environments Each case study provides a real world project example from researchers with extensive experience of using these techniques to research different aspects of environmental sustainability over several decades **International**

Encyclopedia of Transportation, 2021-05-13 In an increasingly globalised world despite reductions in costs and time transportation has become even more important as a facilitator of economic and human interaction this is reflected in technical advances in transportation systems increasing interest in how transportation interacts with society and the need to provide novel approaches to understanding its impacts This has become particularly acute with the impact that Covid 19 has had on transportation across the world at local national and international levels Encyclopedia of Transportation Seven Volume Set containing almost 600 articles brings a cross cutting and integrated approach to all aspects of transportation from a variety of interdisciplinary fields including engineering operations research economics geography and sociology in order to understand the changes taking place Emphasising the interaction between these different aspects of research it offers new solutions to modern day problems related to transportation Each of its nine sections is based around familiar themes but brings together the views of experts from different disciplinary perspectives Each section is edited by a subject expert who has commissioned articles from a range of authors representing different disciplines different parts of the world and different social perspectives The nine sections are structured around the following themes Transport Modes Freight Transport and Logistics Transport Safety and Security Transport Economics Traffic Management Transport Modelling and Data Management Transport Policy and Planning Transport Psychology Sustainability and Health Issues in Transportation Some articles provide a technical introduction to a topic whilst others provide a bridge between topics or a more future oriented view of new research areas or challenges The end result is a reference work that offers researchers and

practitioners new approaches new ways of thinking and novel solutions to problems All encompassing and expertly authored this outstanding reference work will be essential reading for all students and researchers interested in transportation and its global impact in what is a very uncertain world Provides a forward looking and integrated approach to transportation Updated with future technological impacts such as self driving vehicles cyber physical systems and big data analytics Includes comprehensive coverage Presents a worldwide approach including sets of comparative studies and applications
