keratoconus with the latest updates on surgical management Covers a very interesting and relevant topic for ophthalmologists and cornea specialists using a practical case based format Uses evidence based algorithms from updated published data and insights from experienced authors **The Wills Eye Manual** Adam T. Gerstenblith, Michael P. Rabinowitz, 2012-05-01 The thoroughly revised Sixth Edition of this classic reference on ocular disease is the perfect guide for all clinicians who treat eye disorders Written in a concise outline format this quick reference is perfect for diagnosis and management of hundreds of ocular conditions This pocket size manual covers from symptoms to treatment all ocular disorders likely to be encountered in the office emergency room or hospital setting Refractive Surgery J. Bradley Randleman, 2024-06-01 Refractive Surgery An Interactive Case Based Approach presents all of the necessary refractive surgery material to make an informed decision regarding diagnosis and management plans Rather than utilizing the standard organization of most books where major points are first introduced and then explained through a series of writings and references this book relies on the clinical decision making process involved with treating refractive surgery patients Refractive Surgery An Interactive Case Based Approach by Dr J Bradley Randleman builds upon foundational initial chapters through the case presentations and focused case discussions encompassing the major topics in refractive surgery today For each case the critical question is simply what data in this chart is the most critical to consider when evaluating this patient for surgery Refractive Surgery An Interactive Case Based Approach is unique in its format Specifically the book facilitates active learning by forcing the reader to think through a series of questions surrounding each patient scenario This active learning not only facilitates better recall of the information presented but also mimics the actual physician to patient clinical experience making this book more relevant than other routine refractive surgery books Bonus This dynamic learning tool is also supplemented by interactive online video material to further the learning experience Enhance the clinical decision making process by watching the videos and then answering a series of questions that lead to the conclusion of each scenario By challenging the reader to perform the thinking and decision making up front and then providing some guidance on the most salient concepts for each case scenario presented along with resources to gain a deeper understanding of the most complex concepts Refractive Surgery An Interactive Case Based Approach engages more in the learning process and thereby allowing to absorb and retain significantly more information to apply to patient care and the education of others Ophthalmologists residents fellows resident and fellowship educators who want to update their refractive surgery knowledge base will appreciate the unique format and style of Refractive Surgery An Interactive Case Based Approach Progressive Keratoconus: Insights into Etiopathogenesis, Diagnosis, and Treatment, 2023-11-29 In the early stages of keratoconus visual acuity may be normal and slit lamp examination is not able to identify the disease phenotype Early diagnosis of keratoconus is of major importance for effective treatment That is why corneal topography and tomography has become the gold standard examination for diagnosis of corneal ectasia Corneal topography is a non contact imaging tool that gives information about

the anterior surface of the cornea Corneal tomography evaluates both anterior and posterior corneal surfaces and is considered mandatory for preoperative evaluation before refractive surgery Until recently Kmax was the main indicator for the progression of keratoconus but recent studies showed that posterior elevation represents the first signal of an ectatic corneal disease Cross linking is considered the gold standard in the treatment of keratoconus and newer techniques allow this procedure to be selective on the areas of corneal thinning
