Green Guide To Specification:

The Green Guide to Specification Jane Anderson, David Shiers, 2009-03-09 Like its predecessors this fourth edition of The Green Guide to Specification provides designers and specifiers with easy to use guidance on how to make the best environmental choices when selecting construction materials and components. It is more comprehensive than its predecessors; it contains more than 1200 specifications used in six types of building: Commercial buildings such as offices, Educational buildings such as schools and universities, Healthcare buildings such as hospitals, Retail, Residential, Industrial. The principal building elements covered in this edition of The Green Guide to Specification include Floors, Roofs, Walls, Windows, Insulation, Landscaping. The performance of each specification is measured against a range of environmental impacts including climate change, toxicity, fossil fuel and ozone depletion, levels of emissions and pollutants, mineral and water extraction. The Green Guide to Specification provides robust information to assist decision making by translating numerical life cycle assessment data into a simple A to E scale of environmental ratings, enabling specifiers to make meaningful comparisons between materials and components. The Green Guide to Specification is an essential tool for architects, surveyors, building managers and property owners seeking to reduce the environmental impact of their buildings by informed and responsible selection of construction materials and components.

The Green Guide to Specification Jane Anderson, David Shiers, Mike Sinclair, 2008-04-15 How can you tell if the materials and components you are specifying have a low environmental impact? A full life cycle assessment is a complex, time-consuming and expensive process; the environmental ratings summarised in this Guide provide a quick and easy way for designers and specifiers to assess their options. The relative environmental performance of over 250 materials and components have been assessed in this guide using carefully researched quantitative data derived from the BRE Environmental Database. A wide range of alternative specifications are provided for walls, floor systems, floor finishes, roofs, windows, doors, ceilings, paints, insulation, landscaping. The performance of each specification is measured against a range of environmental impacts including climate change, toxicity, fossil fuel and ozone depletion, levels of emissions and pollutants, mineral and water extraction. Environmental performance is indicated by a simple to use A B C rating system. To further aid specifiers' guidance on capital costs, typical replacement intervals and information on recycling is also provided for each material and component. An important part of BREEM, the BRE's widely accepted scheme to improve the environmental performance of buildings, The Green Guide to Specification is an essential tool for architects, surveyors, building managers and property owners seeking to reduce the environmental impacts of building materials through informed choice.

The Green Guide to Housing Specification Jane Anderson, Nigel Howard, 2000 Contains over 150 specifications commonly used in housing. This work lists typical wall, roof, floor and other constructions against a simple environmental rating scale from A good to C poor.

Landscape and Sustainability John Benson, Maggie Roe, 2007-08-07 This unique book addresses the issue of sustainability from the point of

view of landscape architecture dealing with professional practices of planners designers and landscape managers This second edition contains updated and new material reflecting developments during the last five years and comprehensively addresses the relationship between landscape architecture and sustainability Much in the text is underpinned by landscape ecology in contrast to the idea of landscape as only appealing to the eye or aspiring cerebrally to be fine art Landscape and Sustainability establishes that the sustainability agenda needs a new mindset among professionals the driving question must always be is it sustainable Developing theory into practice from the global to the local scale and from issues of policy and planning through to detailed design and implementation and on to long term maintenance and management the contributors raise and re examine a complex array of research policy and professional issues and agendas to contribute to the necessary ongoing debate about the future of both landscape and sustainability
