Educating Science Teachers for Sustainability Susan K. Stratton, Rita Hagevik, Allan Feldman, Mark Bloom, 2015-06-18 This volume contains a unique compilation of research and reflections representing multiple vantage points stemming from different parts of the world that can help science educators and teacher educators in finding ways to meaningfully and purposefully embed sustainability into teaching and learning. It is a rich resource for exploring and contextualizing sustainability oriented science education. At this time we find ourselves in a situation in which the earth's ecological system is under significant strain as a result of human activity. In the developed world people are asking: How can we maintain our current standard of living while those in the developing world are asking: How can we increase the quality of our lives all while trying to do what is necessary to mitigate the environmental problems? This volume responds to these questions with a focus on educating for sustainability including historical and philosophical analyses and pedagogical and practical applications in the context of science teacher preparation. Included are many examples of ways to educate science teachers for sustainability from authors across the globe. This text argues that issues of sustainability are increasingly important to our natural world, built world, national and international economics and of course the political world. The ideas presented in the book provide examples for original, effective and necessary changes for envisioning educating science teachers for sustainability that will inform policy makers.

Sociology David M. Newman, 2018-01-17 In *Sociology: Exploring the Architecture of Everyday Life*, David M. Newman shows students how to see the unfamiliar in the familiar, to step back and see organization and predictability in their taken-for-granted personal experiences. With his approachable writing style and lively personal anecdotes, the author's goal from the first edition has always been the same: to write a textbook that in his words reads like a real book. Newman uses the metaphors of architecture and construction to help students understand that society is not something that just exists out there independently of themselves; it is a human creation that is planned, maintained or altered by individuals. Using vivid prose, examples from current events and the latest research findings, this fully updated Twelfth Edition presents a unique and thought-provoking overview of how society is constructed and experienced. Instead of surveying every subfield in sociology, the more streamlined coverage focuses on the individual and society, the construction of self and society, and social inequality in the context of social structures.

Review of the Environmental Protection Agency's State-of-the-Science Evaluation of Nonmonotonic Dose-Response Relationships as they Apply to Endocrine Disruptors

National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee to Review EPA's State of the Science Paper on Nonmonotonic Dose Response, 2014-05-27 Potential health effects from chemicals that disrupt endocrine function pose an environmental health concern because of their ability to interfere with normal hormone function in human and wildlife populations The endocrine system regulates biological processes throughout the body and is sensitive to small changes in hormone concentrations Endocrine disruptor research has focused primarily on chemicals that affect three hormone pathways that play important roles in reproduction and development the estrogen androgen and thyroid hormone pathways Some of this research has identified dose response relationships that have nonmonotonic curves Nonmonotonic dose response curves NMDRs are of concern because they do not follow the usual assumption made in toxicology that as dose decreases the response also decreases The existence of NMDRs has been a controversial topic for decades and there has been considerable debate about their implications for how chemicals are tested and for how risks from such chemicals are assessed Toxicity tests are designed to identify hazards and to characterize dose response relationships so tests are aimed at finding a high dose that elicits a response and dose response is explored by testing lower doses spaced to identify statistically a no or lowest observed adverse effect level The concern for NMDRs is that such studies as currently designed might not detect the inflection of the dose response curve if only a few doses are tested or if the change in inflection occurs below the range of doses tested Another concern is that some NMDRs are found for biological effects that are not usually evaluated in toxicity tests If current testing strategies are inadequate to account for NMDRs changes to risk assessment practices might

be necessary To help address these issues the U S Environmental Protection Agency EPA developed a draft State of the Science Evaluation Nonmonotonic Dose Responses as they Apply to Estrogen Androgen and Thyroid Pathways and EPA Testing and Assessment Procedures EPA asked the National Research Council to conduct an independent review of this evaluation to ensure that it is scientifically sound and of high quality Review of Environmental Protection Agency s State of the Science Evaluation of Nonmonotonic Dose Response as they Apply to Endocrine Disrupters evaluates whether EPA s evaluation presents a scientifically sound and high quality analysis of the literature on NMDRs This report reviews how well the EPA evaluation described how the assessment was performed whether consistent methods and criteria were applied in the analysis of different evidence streams and whether appropriate methods were applied to evaluating the evidence The report makes recommendations to improve EPA s process and strengthen the evaluation

Immune response and metabolic regulation are highly integrated and this interface maintains a central homeostatic system dysfunction of which can cause obesity associated metabolic disorder such as type 2 diabetes fatty liver disease and cardiovascular disease Insulin resistance is an underlying basis for the pathogenesis of these metabolic diseases Overnutrition or obesity activates the innate immune system with subsequent recruitment of immune cells such as macrophages and T cells which contributes to the development of insulin resistance In particular a significant advance in our understanding of obesity associated inflammation and insulin resistance has been recognition of the critical role of adipose tissue macrophages ATMs ATMs are a prominent source of proinflammatory cytokines such as TNF α and IL 6 that can block insulin action in adipose tissue skeletal muscle and liver autocrine paracrine signaling and cause systemic insulin resistance via endocrine signaling providing a potential link between inflammation and insulin resistance All articles in this topic highlight the interconnection between obesity inflammation and insulin resistance in all its diversity to the mechanisms of obesity induced inflammation and role of immune system in the pathogenesis of insulin resistance and diabetes
