economies undergo no less profound transformations of their economic systems. Contrary to common misconception the transition process cannot be simply reduced to eliminating state intervention and liberalizing the economy. Economies under transition exhibit a unique set of policy challenges. Unlike developed market economies, missing markets or market failures abound. Economic transformation takes the form of rapidly evolving patterns of international trade and investment, industrial structure and consumption. These changes call for appropriate public policies. A continuing flow of investment hinges on suitable institutions, the provision of public infrastructure and other public goods. Adequate regulation can be central in ensuring that environmental resources are sustainably managed. And sophisticated production systems call for corresponding social institutions in terms of education, health and welfare provisions. In all these cases, accurate empirical assessments are central to the design of effective policy. This book presents a selection of pressing economic and social issues in transition economies. Selected issues include the development of particular industrial sectors, the drivers and consequences of foreign direct investment, public finances, urbanization, social indicators, environmental policy and energy diversification. In each case, an original empirical analysis is performed using a variety of advanced quantitative methods applied to recent data. The book will be of interest to economists studying transition economies, economic development or having a general interest in applied economics. It will be of particular interest to applied economists, policy analysts and policy makers in transition economies concerned with the shape and direction of appropriate economic reforms.
