Imaging Spine After Treatment A Case Based Atlas:

Imaging Spine After Treatment Tommaso Scarabino, Saverio Pollice, Giuseppe Carmine Iaffaldano, Domenico Catapano, 2024-01-16 This atlas illustrates the characteristics of imaging after surgical spine treatment. The previous edition has been thoroughly updated and new surgical treatment options are presented. Furthermore, all clinical cases feature new images with the new sequences available from the manufacturers of Magnetic Resonance scanners. The imaging methods presented in the book are MRI involving the use of routine basic sequences and advanced study techniques and CT with and without administration of contrast medium. The modifications of the spine both healthy and pathological that can occur immediately after surgical treatment and in the long term are described in detail. Atlas contents are organized in a general part with the classification of spine pathology and the surgical treatment options and a part with clinical cases enriched by a wealth of images. This easy to consult publication addresses neuroradiologists who wish to gain an adequate expertise in post treatment examinations reporting in order to be able to perform an effective differential diagnosis. **MRI of Degenerative**

Disease of the Spine Paola D'Aprile, Alfredo Tarantino, 2021-07-14 This is the second edition of an acclaimed richly illustrated and comprehensive case based atlas focusing on MRI of degenerative changes in the osteoarticular structures of the spine. Spinal degenerative disease is highly prevalent in the general population and its incidence increases with age. At the same time degenerative spinal conditions are one of the most common causes of pain. The book presents a comprehensive overview of the MR findings observed in degenerative disease of spinal joints, ligaments and paravertebral muscles and offers guidance on selecting the appropriate imaging protocol which is critical in detecting the potentially very subtle changes. The MR study protocols presented include T2 weighted sequences with fat saturation and contrast enhanced T1 weighted sequences with fat saturation since these sequences permit better visualization of inflammatory changes of both anterior and posterior elements of the spine. This richly illustrated second edition highlights the inflammatory component of the degenerative pathology of the spine which in most cases is responsible for the painful symptomatology. It also discusses in detail the use of contrast medium in MRI of spinal degenerative disease. The case based structure of the atlas allows easy but effective consultation by radiologists, neuroradiologists, rheumatologists, orthopedists and physiatrists as well as students.

Epidemiology of Brain and Spinal Tumors Jahangir Moini, Nicholas Avgeropoulos, Mohtashem Samsam, 2021-04-09 Epidemiology of Brain and Spinal Tumors provides a single volume resource on imaging methods and neuroepidemiology of both brain and spinal tumors.
