Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control unit, an integrated control unit features the latest control technology. Instead of a hydraulic controller, a computer electronic controller is used, which provides a wide range of functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling hydraulic flow in a variety of ways and with different drive inputs. To ensure efficient and safe operation, each truck model has a control unit that is specifically adapted to the truck.

Troubleshooting

The processor of the electronic control unit analyzes analogue and digital signals. The processor recognizes hydraulic malfunctions and system errors, and displays an error message on the display/monitor on the control interface. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light failure
- Non-secure detection of the manual emergency stop
- The truck brakes with automatic emergency stop and all hydraulic valves
- The manual brake (as the emergency function) has manual emergency stop activated
- An error code appears on display

These functions can be activated by switching off the emergency stop and the stop switch. During a fault, the control unit displays whether the error is still present. If the error is no longer present, the truck returns to normal operation. If the error persists, the error code appears on the display and one of the measures listed above is carried out.

Changing the controller

4.1.1.1.1.1

Problems regarding component damage due to electrohydraulic discharge. Irreparable damage to working elements will occur if the controller is removed.

The controller is equipped with a "flop" plug, which is attached to the back to avoid any damage. Communication lines pass via this plug. The upper part of the plug and the software version of the controller can be read out via the back connector.

If the controller is replaced, the permitted work unit controller must be identified and plug adapted to the cable harness. All necessary information is available on the cable harness.
