Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control lever, an electrical motor can operate the drive control technology. Instead of a hydraulic accumulator, a computer electronic controller is used. It is a very powerful microcontroller system, it controls functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To use different truck parameters and sensors, each truck model has a control unit, which identifies the truck.

Troubleshooting

The processor of the electronic control unit analyzes analogue and digital signals. The processor recognizes digital messages and system errors, and displays an error message on the display/monitor on the control interface. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light failure
- Recognition function of the internal combustion engine
- The truck status with internal status messages and off the target state
- The main function of the emergency function, the internal combustion engine status off
- An error code appears on display

These functions can be activated by switching off the combustion engine and the fuel supply. During a fault, the control unit shows whether the error is still present. If the error is no longer present, the truck returns to normal operation. If the error persists, the error code appears on the display and one of the measures taken should be taken.

Changing the controller

4.1.1.1.1.1

Problems regarding component damage due to electrostatic discharge. Electrostatic damage is nothing dangerous and does not cause if the controller is covered.

The controller is equipped with a "fingerprint" which is attached to the truck's main control system. Communication takes place via CAN bus. The system unit number and the software version of the controller can be read out via the main diagnostic.

4.1.1.1.1.2

If the controller is replaced, the personal work unit controller must be identified and the data adapted to the truck's hardware. All necessary information is available on the truck's control.
