Contributions to Economics and Econometrics B. Raj, J. Koerts, 2012-12-06

PREFACE TO THE COLLECTION PREAMBLE The editors are pleased to present a selection of Henri Theil's contributions to economics and econometrics in three volumes In

Volume I we have provided an overview of Theil's contributions a brief biography an annotated bibliography of his research

and a selection of published and unpublished articles and chapters in books dealing with topics in econometrics Volume II

contains Theil's contributions to demand analysis and information theory Volume III includes Theil's contributions in

economic policy and forecasting and management science The selection of articles is intended to provide examples of Theil's

many seminal and pathbreaking contributions to economics in such areas as econometrics statistics demand analysis

information theory economic policy analysis aggregation theory forecasting index numbers management science sociology

operations research higher education and much more The collection is also intended to serve as a tribute to him on the

occasion of his 67th birthday These three volumes also highlight some of Theil's contributions and service to the profession

as a leader advisor administrator teacher and researcher Theil's contributions which encompass many disciplines have been

extensively cited both in scientific and professional journals These citations often place Theil among the top 10 researchers

ranked according to number of times cited in the world in various disciplines **Econometrics** John Eatwell, Murray

aims at rehabilitating the descriptive function of socio economic statistics bridging the gap between today's statistical theory

on one hand and econometric and mathematical models of society on the other It does this by offering a deeper

understanding of data and methods with surprising insights the result of the author's six decades of teaching consulting and

involvement in statistical surveys The author challenges many preconceptions about aggregation time series index numbers

frequency distributions regression analysis and probability nudging statistical theory in a different direction *Interpreting*

Economic and Social Data also links statistics with other quantitative fields like accounting and geography This book is aimed

at students and professors in business economics demographic and social science courses and in general at users of socio

economic data requiring only an acquaintance with elementary statistical theory **Finance and Competitiveness in**

Developing Countries José María Fanelli, Rohinton Medhora, 2002 Using detailed trade and firm level financial data the

authors demonstrate for example that while links between finance and competitiveness are strong they are not uniform across sectors and countries This book examines the link between finance and competitiveness at the macro and sectoral levels in seven different countries Argentina Brazil India Indonesia the Philippines South Africa and Tunisia and investigates key international issues such as the evidence of the impact of exchange rate variability on trade patterns in bank lending and trade openness and development Analysis of Panel Data Cheng Hsiao,2003-02-13 This book reviews the basic econometric methods that have been used to analyze panel data in other words data collected by observing a number of individuals over time Copyright Libri GmbH All rights reserved *Monetary Theory and Thought* Haim Barkai,Stanley Fischer,Nissan Liviatan,1993-05-18 Don Patinkin s pioneering work integrating monetary and value theory in a Walrasian general equilibrium context anticipated by almost two decades the line of research which attempts to recast macroeconomics by reference to its microeconomic foundations The notion of an integrated set of markets offered intuitive perception of intermarket linkages At the same time it highlighted some of the pitfalls of traditional neoclassical monetary analysis such as the erroneous imputation of unitary elasticity to the demand curve for money Patinkin s presentation of general equilibrium illuminated the difficulty in upholding the Keynesian notion of underemployment equilibrium His insightful efforts to understand behaviour in labour markets in disequilibrium led him to provide the first well worked out example of the powerful implications of disequilibrium and thereby to lay the foundations for the disequilibrium analysis of the 1970s

Macroeconometrics and Time Series Analysis Steven Durlauf,L. Blume,2016-04-30 Specially selected from The New Palgrave Dictionary of Economics 2nd edition each article within this compendium covers the fundamental themes within the discipline and is written by a leading practitioner in the field A handy reference tool Time Series and Panel Data Econometrics M. Hashem Pesaran,2015 This book is concerned with recent developments in time series and panel data techniques for the analysis of macroeconomic and financial data It provides a rigorous nevertheless user friendly account of the time series techniques dealing with univariate and multivariate time series models as well as panel data models It is distinct from other time series texts in the sense that it also covers panel data models and attempts at a more coherent integration of time series multivariate analysis and panel data models It builds on the author s extensive research in the areas of time series and panel data analysis and covers a wide variety of topics in one volume Different parts of the book can be used as teaching material for a variety of courses in econometrics It can also be used as reference manual It begins with an overview of basic econometric and statistical techniques and provides an account of stochastic processes univariate and multivariate time series tests for unit roots cointegration impulse response analysis autoregressive conditional heteroskedasticity models simultaneous equation models vector autoregressions causality forecasting multivariate volatility models panel data models aggregation and global vector autoregressive models GVAR The techniques are illustrated using Microfit 5 Pesaran and Pesaran 2009 OUP with applications to real output inflation interest rates exchange rates and stock

Rinnooy Kan, 2012-12-06 This book contains the Proceedings of a symposium that was held in Rotterdam from 12 to 15 January 1982 to celebrate the 25 th anniversary of the Econometric Institute of the Erasmus University The subject of the symposium developments in econometrics and related fields was particularly appropriate for the occasion In 25 years the research carried out at the Econometric Institute developed from the original seminal work in econometrics carried out under the supervision of the first director H Theil to embrace related areas such as mathematical economics operations research systems theory and other branches of mathematics statistics and probability theory To review the state of the art in these areas thirteen leading experts were invited to deliver a lecture at the symposium their contributions form the backbone of this book Together they illustrate the wide range and scope of the current scientific activity in these fields The thirteen authoritative surveys should be of great value to researchers and students alike who want to become acquainted with recent ideas current trends and future developments in their chosen fields of interest Each contribution is preceded by an introduction to the author and his work and followed by a summary of the discussion that followed the lecture A special chapter is devoted to the history of the Econometric Institute **Proceedings of the Fourth Berkeley Symposium on Mathematical Statistics and Probability** Jerzy Neyman, 1960 *Advances in Business and Management Forecasting* Kenneth D. Lawrence, Michael D. Geurts, 2008-01-25 Includes sections devoted to financial applications of forecasting as well as demand forecasting This publication also includes a section on general business applications of forecasting as well as one on forecasting methodologies **Fuzzy Rationality** Kofi Kissi Dompere, 2009-07-22 Philosophy involves a criticism of scientific knowledge not from a point of view ultimately different from that of science but from a point of view less concerned with details and more concerned with the h many of the body of special sciences Here as elsewhere while the older logic shut out possibilities and imprisoned imagination within the walls of the familiar the newer logic shows rather what may happen and refuses to decide as to what must happen Bertrand Russell At any particular stage in the development of humanity knowledge comes up against limits set by the necessarily limited character of the experience available and the existing means of obtaining knowledge But humanity advances by overcoming such limits New experience throws down the limits of old experience new techniques new means of obtaining knowledge throw down the limits of old techniques and old means of obtaining knowledge New limits then once again appear But there is no more reason to suppose these new limits absolute and final than there was to suppose the old ones absolute and final **Fuzziness and Approximate Reasoning** Kofi Kissi Dompere, 2009-07-28 We do not perceive the present as it is and in totality nor do we infer the future from the present with any high degree of dependability nor yet do we accurately know the consequences of our own actions In addition there is a fourth source of error to be taken into account for we do not execute actions in the precise form in which they are imaged and willed Frank H Knight R4 34 p 202 The degree of certainty of confidence felt in the conclusion after it is reached cannot

be ignored for it is of the greatest practical significance The action which follows upon an opinion depends as much upon the amount of confidence in that opinion as it does upon favorableness of the opinion itself The ultimate logic or psychology of these deliberations is obscure a part of the scientifically unfathomable mystery of life and mind Frank H Knight R4 34 p 226 227 With some inaccuracy description of uncertain consequences can be classified into two categories those which use exclusively the language of probability distributions and those which call for some other principle either to replace or supplement

Epistemic Foundations of Fuzziness K. K. Dompere, Kofi Kissi Dompere, 2009-03-13 This monograph is a treatment on optimal fuzzy rationality as an enveloping of decision choice rationalities where limited information vagueness ambiguities and inexactness are essential characteristics of our knowledge structure and reasoning processes The volume is devoted to a unified system of epistemic models and theories of decision choice behavior under total uncertainties composed of fuzzy and stochastic types The unified epistemic analysis of decision choice models and theories begins with the question of how best to integrate vagueness ambiguities limited information subjectivity and approximation into the decision choice process The answer to the question leads to the shifting of the classical paradigm of reasoning to fuzzy paradigm This is followed by discussions and establishment of the epistemic foundations of fuzzy mathematics where the nature and role of information and knowledge are explicated and represented The epistemic foundation allows total uncertainties that constrain decision choice activities knowledge enterprise logic and mathematical structures as our cognitive instruments to be discussed in reference to the phenomena of fuzzification defuzzification and fuzzy logic The discussions on these phenomena lead us to analyze and present models and theories on decision choice rationality and the needed mathematics for problem formulation reasoning and computations The epistemic structures of two number systems made up of classical numbers and fuzzy numbers are discussed in relation to their differences similarities and relative relevance to decision choice rationality The properties of the two number systems lead to the epistemic analysis of two mathematical systems that allow the partition of the mathematical space in support of decision choice space of knowledge and non knowledge production into four cognitively separate but interdependent cohorts whose properties are analyzed by the methods and techniques of category theory The four cohorts are identified as non fuzzy and non stochastic non fuzzy and stochastic both of which belong to the classical paradigm and classical mathematical space and fuzzy and non stochastic and fuzzy and stochastic cohorts both of which belong to the fuzzy paradigm and fuzzy mathematical space The differences in the epistemic foundations of the two mathematical systems are discussed The discussion leads to the establishment of the need for fuzzy mathematics and computing as a new system of reasoning in both exact and inexact sciences The mathematical structures of the cohorts are imposed on the decision choice process to allow a grouping of decision choice models and theories The corresponding classes of decision choice theories have the same characteristics as the logico mathematical cohorts relative to the assumed information knowledge structures The four groupings of models and theories on decision choice activities are then classified

as 1 non fuzzy and non stochastic class with exact and full information knowledge structure no uncertainty 2 non fuzzy and stochastic class with exact and limited information knowledge structure stochastic uncertainty 3 fuzzy and non stochastic class with full and fuzzy information knowledge structure fuzzy uncertainty and 4 Fuzzy and stochastic class with fuzzy and limited information knowledge structure fuzzy and stochastic uncertainties All these different classes of decision choice problems have their corresponding rationalities which are fully discussed to present a unified logical system of theories on decision choice process The volume is concluded with epistemic discussions on the nature of contradictions and paradoxes viewed as logical decision choice problems in the classical paradigm and how these contradictions and paradoxes may be resolved through fuzzy paradigm and the methods and techniques of optimal fuzzy decision choice rationality The logical problem of sorites paradox with its resolution is given as an example Interested audience includes those working in the areas of economies decision choice theories philosophy of sciences epistemology mathematics computer science engineering cognitive psychology fuzzy mathematics and mathematics of fuzzy stochastic processes
