Psychopathology Harold Kincaid, Jacqueline A. Sullivan, 2023-10-31 Scholars question the extent to which current psychiatric classification systems are inadequate for diagnosis treatment and research of mental disorders and offer suggestions for improvement In this volume leading philosophers of psychiatry examine psychiatric classification systems including the Diagnostic and Statistical Manual of Mental Disorders DSM asking whether current systems are sufficient for effective diagnosis treatment and research Doing so they take up the question of whether mental disorders are natural kinds grounded in something in the outside world Psychiatric categories based on natural kinds should group phenomena in such a way that they are subject to the same type of causal explanations and respond similarly to the same type of causal interventions When these categories do not evince such groupings there is reason to revise existing classifications The contributors all question current psychiatric classifications systems and the assumptions on which they are based They differ however as to why and to what extent the categories are inadequate and how to address the problem Topics discussed include taxometric methods for identifying natural kinds the error and bias inherent in DSM categories and the complexities involved in classifying such specific mental disorders as oppositional defiance disorder and pathological gambling

A Metaphysics of Psychopathology Peter Zachar, 2014-03-28 An exploration of what it means to think about psychiatric disorders as real true and objective and the implications for classification and diagnosis In psychiatry few question the legitimacy of asking whether a given psychiatric disorder is real similarly in psychology scholars debate the reality of such theoretical entities as general intelligence superegos and personality traits And yet in both disciplines little thought is given to what is meant by the rather abstract philosophical concept of real Indeed certain psychiatric disorders have passed from real to imaginary as in the case of multiple personality disorder and from imaginary to real as in the case of post traumatic stress disorder In this book Peter Zachar considers such terms as real and reality invoked in psychiatry but often obscure and remote from their instances as abstract philosophical concepts He then examines the implications of his approach for psychiatric classification and psychopathology Proposing what he calls a scientifically inspired pragmatism Zachar considers such topics as the essentialist bias diagnostic literalism and the concepts of natural kind and social construct Turning explicitly to psychiatric topics he proposes a new model for the domain of psychiatric disorders the imperfect community model which avoids both relativism and essentialism He uses this model to understand such recent controversies as the attempt to eliminate narcissistic personality disorder from the DSM 5 Returning to such concepts as real true and objective Zachar argues that not only should we use these metaphysical concepts to think philosophically about other concepts we should think philosophically about them

Extraordinary Science and Psychiatry Jeffrey Poland, Serife Tekin, 2024-04-30 Leading scholars offer perspectives from the philosophy of science on the crisis in psychiatric research that exploded after the publication of DSM 5 Psychiatry and mental health research is in crisis with tensions between psychiatry's clinical and research aims and controversies over diagnosis treatment and scientific constructs for studying mental disorders At the center of these controversies is the Diagnostic and Statistical Manual of Mental Disorders DSM which especially after the publication of DSM 5 many have found seriously flawed as a guide for research This book addresses the crisis and the associated extraordinary science Thomas Kuhn's term for scientific research during a state of crisis from the perspective of philosophy of science The goal is to help reconcile the competing claims of science and phenomenology within psychiatry and to offer new insights for the philosophy of science The contributors discuss the epistemological origins of the current crisis the nature of evidence in psychiatric research and the National Institute for Mental Health's Research Domain Criteria project They consider particular research practices in psychiatry computational personalized mechanistic and user led and the specific categories of schizophrenia depressive disorder and bipolar disorder Finally they examine the DSM's dubious practice of pathologizing normality Contributors Richard P Bentall John Bickle Robyn Bluhm Rachel Cooper Kelso Cratsley Owen Flanagan Michael Frank George Graham Ginger A Hoffman Harold Kincaid Aaron Kostko Edouard Machery Jeffrey

Murphy, 2012-01-13 An analysis of the understanding classification and explanation of mental disorders that proposes that psychiatry adopt the best practices of the cognitive sciences In *Psychiatry in the Scientific Image* Dominic Murphy looks at psychiatry from the viewpoint of analytic philosophy of science considering three issues how we should conceive of classify and explain mental illness If someone is said to have a mental illness what about it is mental What makes it an illness How might we explain and classify it A system of psychiatric classification settles these questions by distinguishing the mental illnesses and showing how they stand in relation to one another This book explores the philosophical issues raised by the project of explaining and classifying mental illness Murphy argues that the current literature on mental illness exemplified by the Diagnostic and Statistical Manual of Mental Disorders is an impediment to research it lacks a coherent concept of the mental and a satisfactory account of disorder and yields too much authority to commonsense thought about the mind He argues that the explanation of mental illness should meet the standards of good explanatory practice in the cognitive neurosciences and that the classification of mental disorders should group symptoms into conditions based on the causal structure of the normal mind Philosophy and Psychopathology Manfred Spitzer, Brendan A. Maher, 2012-12-06 Philosophy

and psychopathology have more in common than philosophers psychiatrists and clinical psychologists might think Three fields of inquiry come to mind 1 Questions about the scientific status of psychopathological statements and claims 2 ethical questions and 3 problems regarding the question of how to account for something like a disordered mind While the first two domains have frequently been addressed in articles and debates think of the mind body problem and the problem of institutionalization versus self determination as examples of issues in the two fields the question of how the mind should be conceived in order for psychopathology to work best has seldom been discussed The present volume focuses on this question Perception thought affect will and the like are terms which made their way from philosophy into psychology and into present

psychiatry where disturbances of these faculties or functions are believed to form the most basic part of symptomatology While these terms and many others that are used to refer to symptoms of mental disorder such as self consciousness drive and identity may seem to be purely descriptive and theoretically innocent they are packed with implicit assumptions theoretical concepts and sometimes dogmatic postulates

Freud, the Reluctant Philosopher Alfred I. Tauber, 2010-07-01 Freud began university intending to study both medicine and philosophy But he was ambivalent about philosophy regarding it as metaphysical too limited to the conscious mind and ignorant of empirical knowledge Yet his private correspondence and his writings on culture and history reveal that he never forsook his original philosophical ambitions Indeed while Freud remained firmly committed to positivist ideals his thought was permeated with other aspects of German philosophy Placed in dialogue with his intellectual contemporaries Freud appears as a reluctant philosopher who failed to recognize his own metaphysical commitments thereby crippling the defense of his theory and misrepresenting his true achievement Recasting Freud as an inspired humanist and reconceiving psychoanalysis as a form of moral inquiry Alfred Tauber argues that Freudianism still offers a rich approach to self inquiry one that reaffirms the enduring task of philosophy and many of the abiding ethical values of Western civilization

The Ethical Treatment of Depression Paul Biegler, 2011-05-20 A philosopher argues there is an ethical imperative to provide psychotherapy to depressed patients because the insights gained from it promote autonomy One in six people worldwide will experience depression over the course of a lifetime Many who seek relief through the healthcare system are treated with antidepressant medication in the United States nearly 170 million prescriptions for antidepressants were written in 2005 resulting in more than 12 billion in sales And yet despite the dominance of antidepressants in the marketplace and the consulting room another treatment for depression has proven equally effective psychotherapy in particular cognitive behavior therapy CBT Antidepressants can lift mood independent of a person's understanding of symptoms or stressors By contrast CBT teaches patients skills for dealing with distressing feelings negative thoughts and causal stressors In *The Ethical Treatment of Depression* Paul Biegler argues that the insights patients gain from the therapeutic process promote autonomy He shows that depression is a disorder in which autonomy is routinely and extensively undermined and that physicians have a moral obligation to promote the autonomy of depressed patients He concludes that medical practitioners have an ethical imperative to prescribe psychotherapy CBT in particular for depression To make his case Biegler draws on a wide philosophical literature relevant to autonomy and the emotions and makes a comprehensive survey of the latest research findings from the

psychological sciences Forcefully argued densely researched and engagingly written the book issues a challenge to physicians who believe their duty of care to depressed patients is discharged by merely writing prescriptions for antidepressants The Undermining of Beliefs in the Autonomy and Rationality of Consumers John O'Shaughnessy, Nicholas O'Shaughnessy, 2007-11-08 This book examines modern consumption focusing on concepts of autonomy and rationality The authors adopt a moderating perspective reviewing and critiquing attacks on these concepts in order to work towards a more nuanced view of the consumer *Plurality and Perspective in Psychoanalysis* Adam Rosen-Carole, 2013-02-28

Psychoanalysis is a historical discourse of suffering and healing under conditions of modernity rather than a metaphysical discourse of universal truth and must be so due to the ontological indeterminacy of psychic life Demonstrating this proceeds through the substantiation of two primary theses First pluralism in psychoanalysis thus the perspectival character of psychoanalytic knowing is irreducible Second psychic life is partially pliable to interpretive constitution rather than a self subsistent object domain fully available to third personal objective description Together these theses provide the framework for a radical rethinking of the authority of psychoanalytic knowledge and practice and of the nature of psychoanalytic claims to objectivity Psychoanalytic interpretations are best understood as existentially interrogative they test who and how one might be and if successful to some extent identity formative The validity conditions of psychoanalytic knowledge thus concern the creation discovery of satisfactory forms of practice orienting self narration rather than those regularly operative in the natural sciences However an adequate assessment of psychoanalytic claims requires that the claims of science are given due consideration and the impediments to practice orienting self narration under conditions of late modernity are acknowledged

Persuasion in Advertising John O'Shaughnessy, Nicholas J. O'Shaughnessy, 2004 A practical and in depth guide to the art of advertising persuasion this book draws on research concepts and case examples from the US and Europe to explain advertising theories and set out strategies for adoption **Addiction and Responsibility** Jeffrey Poland, George Graham, 2011-05-13 The intertwining of addiction and responsibility in personal philosophical legal research and clinical contexts Addictive behavior threatens not just the addict's happiness and health but also the welfare and well being of others It represents a loss of self control and a variety of other cognitive impairments and behavioral deficits An addict may say I couldn't help myself But questions arise are we responsible for our addictions And what responsibilities do others have to help us This volume offers a range of perspectives on addiction and responsibility and how the two are bound together Distinguished contributors from theorists to clinicians from neuroscientists and psychologists to philosophers and legal scholars discuss these questions in essays using a variety of conceptual and investigative tools Some contributors offer models of addiction related phenomena including theories of incentive sensitization ego depletion and pathological affect others address such traditional philosophical questions as free will and agency mind body and other minds Two essays written by scholars who were themselves addicts attempt to integrate first person phenomenological accounts with the third

person perspective of the sciences Contributors distinguish among moral responsibility legal responsibility and the ethical responsibility of clinicians and researchers Taken together the essays offer a forceful argument that we cannot fully understand addiction if we do not also understand responsibility
