Immunotoxicity, Immune Dysfunction, and Chronic Disease Rodney R. Dietert, Robert W. Luebke, 2012-06-05

Chronic diseases are the leading cause of deaths worldwide and according to the World Economics Council and the Harvard School of Public Health the cost of chronic diseases is expected to reach a staggering 48% of global gross domestic product by the year 2030 The urgency of the issue was demonstrated in 2011 when for only the second time in its existence the U N General Assembly brought a health issue to the floor for consideration chronic diseases To date most considerations of the issue have approached the topic from the vantage point that chronic diseases are a myriad of largely unconnected diseases and conditions arising in diverse tissues organs and physiological systems This book Immunotoxicity Immune Dysfunction and Chronic Disease deviates from that prior model It considers the interconnectivity of chronic diseases with both environmental insult of the immune system and subsequent immune dysfunction and inflammatory dysregulation as the underlying basis for many if not most chronic diseases This change in the perception of environment immune linkages to chronic disease is significant and has immediate implications both for the prevention of disease as well as for the development of more effective therapeutic approaches Rather than considering environmental factors and types of reported immune alterations e g depressed humoral immunity as is common in books involving immunotoxicity the present book approaches the environment immune disease triad from the standpoint of the disease Each chapter emphasizes one or more specific immune dysfunction based chronic disease s or condition s e g asthma atherosclerosis multiple sclerosis lupus and describes 1 the suggested environmental risk factors 2 the underlying immune dysfunction s associated with the disease and 3 the overall health consequences of the disease This book is an early entry for a new Toxicology book series for Springer titled Molecular and Integrative Toxicology MaIT The series will feature detailed research information but in the context of a more integrative or holistic framework As part of this framework the chapters will contain a section on Key Points as well as Recommendations where appropriate The goal is to cover the most timely state of the art issues in toxicology as well as to ensure that the information is maximally accessible for research scientists teachers physicians and students We are particularly grateful to the numerous chapter authors for providing comprehensive and expert disease oriented contributions We are also appreciative of their willingness to consider their material not as disparate pieces of what has become a major health crisis but rather as key pieces in a network of apparently interconnected health challenges

Immunotoxicity, Immune Dysfunction, and Chronic Disease Rodney R. Dietert, Robert W. the vantage point that chronic diseases are a myriad of largely unconnected diseases and conditions arising in diverse tissues organs and physiological systems This book Immunotoxicity Immune Dysfunction and Chronic Disease deviates from that prior model It considers the interconnectivity of chronic diseases with both environmental insult of the immune system and subsequent immune dysfunction and inflammatory dysregulation as the underlying basis for many if not most chronic diseases This change in the perception of environment immune linkages to chronic disease is significant and has immediate implications both for the prevention of disease as well as for the development of more effective therapeutic approaches Rather than considering environmental factors and types of reported immune alterations e g depressed humoral immunity as is common in books involving immunotoxicity the present book approaches the environment immune disease triad from the standpoint of the disease Each chapter emphasizes one or more specific immune dysfunction based chronic disease s or condition s e g asthma atherosclerosis multiple sclerosis lupus and describes 1 the suggested environmental risk factors 2 the underlying immune dysfunction s associated with the disease and 3 the overall health consequences of the disease This book is an early entry for a new Toxicology book series for Springer titled Molecular and Integrative Toxicology MaIT The series will feature detailed research information but in the context of a more integrative or holistic framework As part of this framework the chapters will contain a section on Key Points as well as Recommendations where appropriate The goal is to cover the most timely state of the art issues in toxicology as well as to ensure that the information is maximally accessible for research scientists teachers physicians and students We are particularly grateful to the numerous chapter authors for providing comprehensive and expert disease oriented contributions We are also appreciative of their willingness to consider their material not as disparate pieces of what has become a major health crisis but rather as key pieces in a network of apparently interconnected health challenges Interaction of Nanomaterials with the Immune System James C.

Immunopathology in Toxicology and Drug Development Volume 2 Organ Systems offers summaries of organ specific immunobiology and immunopathology as well as common responses to xenobiotics These informative and strategic books were created in response to the large segment of drug development that focuses on chronic diseases many of which involve alterations to the immune system Therapies that target these diseases commonly involve some form of immunomodulation As a result the two volumes of Immunopathology in Toxicology and Drug Development are critical texts for individuals involved in diverse aspects of drug development Readers will acquire a thorough understanding of immunopathology for detection and accurate interpretation of pathologic effects of xenobiotics on the immune system *Molecular Immunotoxicology*

Emanuela Corsini, Henk Van Loveren, 2014-08-06 The human immune system is constantly exposed to chemical contaminants whether from food water or air Some chemicals directly elicit an immune response while others indirectly activate or deactivate components within the immune system Thus when tracking or predicting the effect of a chemical on the immune system many different pathways and modes of action need to be considered Following an introduction to the various pathways and toxicity mechanisms from a systemic perspective the main part of this comprehensive reference surveys individual molecular mechanisms of important immunotoxicants from PAHs to biopharmaceuticals and from receptor mediated toxicity to nanoparticle toxicity using analyses based on molecular effects rather than on animal models Taken together the knowledge presented here provides an up to date overview of this hot topic that can be directly applied to the prediction and characterization of immunotoxic effects in drugs chemicals and environmental contaminants

Investigative Immunotoxicology Helen Tryphonas, Michel Fournier, Barry R. Blakley, Judit Smits, Pauline Brousseau, 2005-01-27 Investigative Immunotoxicology provides a critical evaluation of proposed experimental animal models and approaches and discusses the contribution that immunotoxicity can make to the overall assessment of chemical induced adverse health effects on humans and the ecosystem Following a review of general concepts in immunotoxicology the book discusses

Immunotoxicology And Immunopharmacology H Dean Jack, 1994-06-30 The second edition

of this text has been revised and refocused to reflect the transformation of immunotoxicology from a subdiscipline of toxicology to an independent area of research that can best be described as environmental immunology New chapters discuss the role of immune mediators in liver lung and skin toxicity in regulating chemical metabolizing enzymes and in the immunosuppression produced by ultraviolet light More emphasis is placed on the clinical consequences of immunotoxicity as well as the interpretation of experimental data for predicting human health risk The second edition is divided into three major sections immunosuppression autoimmunity and hypersensitivity This new organization of the text allows for a more thorough treatment of these phenomena with greater attention to test methods theoretical considerations and clinical
