It will focus on both operative and non-operative treatments that allow safe return to play utilizing not only the latest scientific literature supporting in-season decisions but also the experiences of the authors who have spent many years treating these athletes. Divided into sections on orthopedic and medical considerations, the first part is organized anatomically to present the breadth of injury and treatment strategies available from injuries to the shoulder and elbow to ACL MCL PCL tears and sprains to tendinopathies and sports hernia among many other conditions. The second section covers diverse medical topics germane to football including heat and cardiac issues, traumatic brain injury, mental health, and infectious disease considerations, pain management, and the expanding role of platelet-rich plasma (PRP) in non-operative treatment.
