Lipid And Biopolymer Monolayers At Liquid Interfaces:

Lipid and Biopolymer Monolayers at Liquid Interfaces K.S. Birdi, 2013-06-29 During the past few decades much research has been reported on the formation of insoluble monomolecular films of lipids and biopolymers synthetic polymers and proteins on the surface of water or at the oil water interface This interest arises from the fact that monomolecular film studies have been found to provide much useful information on a molecular scale information that is useful for understanding many industrial and biological phenomena in chemical agricultural pharmaceutical medical and food science applications For instance information obtained from lipid monolayer studies has been useful in determining the forces that are known to stabilize emulsions and biological cell membranes The current texts on surface chemistry generally devote a single chapter to the characteristics of spread monolayers of lipids and biopolymers on liquids and a researcher may have to review several hundred references to determine the procedures needed to investigate or analyze a particular phenomenon Furthermore there is an urgent need at this stage for a text that discusses the state of the art regarding the surface phenomena exhibited by lipids and biopolymers as they are relevant to a wide variety of surface and interfacial processes Self-Assembly

Monolayer Structures of Lipids and Macromolecules at Interfaces K.S. Birdi, 2007-05-08 Self assembly monolayer SAM structures of lipids and macromolecules have been found to play an important role in many industrial and biological phenomena This book describes two procedures namely the STM and AFM that are used to study SAMs at solid surfaces K S Birdi examines the SAMs at both liquid and solid surfaces by using the Langmuir monolayer method This book is intended for researchers academics and professionals *Liquid-Liquid Interfaces Theory and Methods* Alexander G. Volkov, David W.

Molecular Interactions Aurelia Meghea, 2012-02-29 In a classical approach materials science is mainly dealing with interatomic interactions within molecules without paying much interest on weak intermolecular interactions However the variety of structures actually is the result of weak ordering because of noncovalent interactions Indeed for self assembly to be possible in soft materials it is evident that forces between molecules must be much weaker than covalent bonds between the atoms of a molecule The weak intermolecular interactions responsible for molecular ordering in soft materials include hydrogen bonds coordination bonds in ligands and complexes ionic and dipolar interactions van der Waals forces and hydrophobic interactions Recent evolutions in nanosciences and nanotechnologies provide strong arguments to support the opportunity and importance of the topics approached in this book the fundamental and applicative aspects related to molecular interactions being of large interest in both research and innovative environments We expect this book to have a strong impact at various education and research training levels for young and experienced researchers from both academia and industry
