$y - k = m(x - h)$ where m is the slope of the line and (h, k) is a point on the line any point works to write an equation in point slope form given a graph of that equation first determine the slope by picking two points then pick any point on the line and write it as an ordered pair (h, k)

point slope is a specific form of linear equations in two variables $y - b = m(x - a)$ when an equation is written in this form m gives the slope of the line and a b is a point the line passes through this form is derived from the slope formula want to learn more about point slope form check out this video
