provide useful information and suggestions for a sustainable management of bees around the world which can then be applied to project development and implementation **Guidelines for sustainable tick control and acaricide resistance management in livestock** Food and Agriculture Organization of the United Nations, 2025-05-23 These guidelines offer a comprehensive resource for managing tick control and tackling acaricide resistance in livestock They emphasize the growing problem of acaricide resistance which has been observed in various regions The document provides in depth information on tick biology available synthetic chemical controls and the underlying mechanisms of acaricide resistance It stresses the importance of continuously monitoring tick populations and resistance levels to inform more effective control strategies To address this resistance the guidelines recommend Integrated Tick Management ITM a holistic approach that integrates chemical treatments with non chemical methods This strategy aims to reduce acaricide use helping to slow resistance development and minimize potential environmental and public health risks Additionally the guidelines highlight the necessity of strong regulatory frameworks to ensure the quality safety and effectiveness of tick control products In conclusion these guidelines deliver a thorough overview of the challenges and strategies related to tick control and acaricide resistance advocating for sustainable practices and ongoing research to improve livestock health and productivity while reducing the risks posed by tick infestations and the diseases they transmit

Practical surveillance guidelines for the progressive control of foot-and-mouth disease and other transboundary animal diseases Metwally, S.; Drewe, J.A.; Ferrari, G.; Gonzales, J.L.; McLaws, M.; Salman, M.; Wagner, B. , 2024-09-20 Progressive control pathways provide a stepwise measurable approach to disease control and potentially eradication Surveillance systems must be capable of providing useful information to document programme progress assessing intervention efforts and the achievement of interim outcomes This document demonstrates a practical surveillance approach that progresses from measuring broad disease epidemiology and risk factors to specifically evaluating intervention options and documenting low disease prevalence The process focusses on aligning practical surveillance components with disease programme outcomes while focusing on foot and mouth disease as an example

Farm health and productivity management of dairy young stock Siert-Jan Boersema, Joao Cannas da Silva, John Mee, Jos Noordhuizen, 2023-09-04 The rearing of young stock until calving is often neglected on dairy farms compared to the management of adult cattle It is often not realized that young stock represent a critical investment in the future of the dairy farm and that sufficient attention should be paid to the rearing period to safeguard that investment and to gain efficiency Optimal weight gain and health during rearing are essential The ultimate goals are that the heifer after her first calving enters into milk production to her fullest genetic potential and that she will have an optimal health and longevity in the herd A population medicine approach is used to focus on healthy animals which bring profit rather than costs Practical tools are provided to manage the complexity of young stock rearing This approach provides the farmer with structure planning organisation and coaching Risk identification and risk management like in bio security and in quality risk

management are key aspects of the population medicine approach Practical examples are added to illustrate the points Finally a section on diseases in young stock is added as a quick reference guide This book is a valuable reference for practising veterinarians herd health practitioners extension officers and other farm advisors as well as dairy farmers

Development of integrated multipurpose animal recording systems Food and Agriculture Organization of the United Nations,2018-08-21 Animal identification and recording serves multiple purposes in a country s livestock sector It is a prerequisite to establish and operate any genetic improvement programme It also contributes to animal traceability and disease control as well as to deterring stock theft Traceability of animals and their products helps to ensure the safety and quality of animal products and contributes to enhance market access and to generate larger incomes for producers and other players in the value chain Animal recording systems are therefore not just an information system but a powerful tool for livestock development and for contributing to global demands for food security and poverty alleviation To make animal recording systems effective they must be supported by appropriate public and private policies and a legal and institutional framework These multiple uses of animal identification and recording highlight the need to adopt multipurpose systems that integrates animal identification and registration animal traceability animal health information and performance recording The FAO guidelines for development of integrated multipurpose animal recording systems have been prepared with the objective of helping countries to design and implement such systems and to maximize the chances that they will be sustained These guidelines put performance recording in a more general context and hence to complement rather than replace the previous FAO guidelines These guidelines focus primarily upon the process rather than the methods and the technology e g details of the equipment and measurements since the latter is sufficiently covered by other guidelines Where necessary the guidelines are formulated to suit low or medium input production environments
