## World Population

### Fill in the Blanks

**DIRECTIONS:** Use the information in your textbook to fill in the blanks for the following sentences.

World population more than (1) doubled between 1800 and 1950. By 2000 there were more than 6 (2) billion people in the world.

Population grows when the human (3) birth rate exceeds the death rate. In countries where families traditionally are large, the birthrate is high. Population (4) doubling time is reduced when high birthrates combine with low death rates.

One challenge of rapid population growth is producing enough (5) food. Countries also may experience (6) shortage of water, housing, and clothing.

Some developed countries are experiencing negative growth rates. This situation leads to economic problems, such as (7) labor shortages.

The earth's population distribution is uneven, partly because much of the land is (8) inhospitable. Population density refers to the (9) average number of people living on a square mile or square kilometer of land. Bangladesh has many people living in a small area, so its population density is (10) high. In contrast, Canada has a low population density because of its large land area. Population density is a useful measure, but it does not describe population (11) distribution, or how many people live in cities as opposed to rural areas.

When people move from place to place, it is called (12) migration. When many people move from the countryside to live in the city, (13) urbanization occurs. Today about (14) half of the human population lives in cities. People (15) emigrate from the country of their birth for many reasons, but most often it is to find work and to build better lives for themselves. People who are forced to flee to escape war or disaster are called (16) refugees.
