Introduction

The Model 2700 requires firmware revision B03 or higher (B04, B05, etc.) to properly support the Model 7701 Low-Voltage 32-Channel Differential Multiplexer, the Model 7703 Multiplexer – Digital I/O Module, and the Model 7709-6 x 8 Matrix Module. If the firmware revision is lower than B03, a ROM upgrade will be required.

Step 1. Determine the firmware revision of your Model 2700

The firmware revision is briefly displayed during the power-on sequence of the instrument. When the instrument is turned on, all display annunciators will turn on for a short period of time. After that, the firmware revision will be briefly displayed as follows:

REV:yyy/zzz

where: yyy is the firmware revision (e.g., B03) of your Model 2700.

zzz is the display board firmware revision (e.g., A01), which does not apply to this upgrade.

To determine the firmware revision with remote control, use the *IDN? query command. After sending the *IDN? command and addressing the Model 2700 to talk, the following response message is sent to the computer:

KEITHLEY INSTRUMENTS INC., MODEL 2700, xxxxxx, yyy/zzz

where: xxxxxx is the serial number of the Model 2700.

yyy is the firmware revision (e.g., B03) of your Model 2700.

zzz is the display board firmware revision (e.g., A01), which does not apply to this upgrade.

Step 2. Determine the next course of action

Based on the firmware revision of your Model 2700, choose the appropriate course of action:

- If the firmware revision is B03 or higher, an upgrade is not needed to use the Models 7701, 7707, or 7709 with the Model 2700.
- If the firmware revision is B02 or B01, then upgrade is required. Proceed to Step 3 to perform the upgrade.
- If the firmware revision begins with the letter A (e.g., A01, A02, etc.), DO NOT perform the upgrade. For these revisions, a hardware upgrade is also required. Contact your local Keithley service center for instructions and pricing for upgrading your Model 2700.

Step 3. Perform the ROM upgrade (from B01 or B02 Revision)

System requirements

The ROM upgrade is provided on the two installation disks. The minimum requirements for the PC is that it is Pentium-class running Windows 95. The firmware can be installed via the IEEE-488 bus or the RS-232 interface:

- **IEEE-488 Bus** — If using the IEEE-488 bus, a Keithley, CEC, or National Instruments IEEE-488.2 interface board must be installed in the PC. Use an IEEE-488.2 cable to connect the interface board to the Model 2700.
- **RS-232 Interface** — If using the RS-232 port, use an RS-232C cable to connect the port to the Model 2700.

ROM upgrade procedure

1. From Windows, click Start → Settings → Control Panel → Add/Remove Programs, and then remove KI Model 2700 ROM Upgrade (A02 or B02) if previously installed.
2. Install the KI Model 2700 ROM Upgrade Disk.1 into the PC.
3. From Windows, click Start → Run.
4. From the Windows dialog box, run the A2setup.exe file, and follow all the prompted instructions.
5. From Windows, click Start → Programs → KI Model 2700 ROM Upgrade (B03) and then follow all prompted instructions.
6. Perform Step 1 above (determine the firmware of your Model 2700) to verify B03 installation.

Lithium ion batteries LIBs as a key part of the 2019 Nobel Prize in Chemistry have become increasingly important in recent years owing to their potential impact on building a more sustainable future Compared with other batteries developed LIBs offer high energy density high discharge power and a long service life These characteristics have facilitated a remarkable advance of LIBs in many frontiers including electric vehicles portable and flexible electronics and stationary applications Since the field of LIBs is advancing rapidly and attracting an increasing number of researchers it is necessary to often provide the community with the latest updates Therefore this book was designed to focus on updating the electrochemical community with the latest advances and prospects on various aspects of LIBs The materials presented in this book cover advances in several fronts of the technology ranging from detailed fundamental studies of the electrochemical cell to investigations to better improve parameters related to battery packs

Materials Fundamentals of Gate Dielectrics Alexander A. Demkov, Alexandra Navrotsky, 2006-05-24 This book presents materials fundamentals of novel gate dielectrics that are being introduced into semiconductor manufacturing to ensure the continuous scaling of the CMOS devices This is a very fast evolving field of research so we choose to focus on the basic understanding of the structure thermodynamics and electronic properties of these materials that determine their performance in device applications Most of these materials are transition metal oxides Ironically the d orbitals responsible for the high dielectric constant cause severe integration difficulties thus intrinsically limiting high k dielectrics Though new in the electronics industry many of these materials are well known in the field of ceramics and we describe this unique connection The complexity of the structure property relations in TM oxides makes the use of the state of the art first principles calculations necessary Several chapters give a detailed description of the modern theory of polarization and heterojunction band discontinuity within the framework of the density functional theory Experimental methods include oxide melt solution calorimetry and differential scanning calorimetry Raman scattering and other optical characterization techniques transmission electron microscopy and x ray photoelectron spectroscopy Many of the problems encountered in the world of CMOS are also relevant for other semiconductors such as GaAs A comprehensive review of recent developments in this field is thus also given The book should be of interest to those actively engaged in the gate dielectric research and to graduate students in Materials Science Materials Physics Materials Chemistry and Electrical Engineering
