Marine Renewable Energy Technology and Environmental Interactions Mark A. Shields, Andrew I.L.

Payne, 2014-02-12 It is now widely recognized that there is a need for long term secure and suitable sustainable forms of energy Renewable energy from the marine environment in particular renewable energy from tidal currents wave and wind can help achieve a sustainable energy future Our understanding of environmental impacts and suitable mitigation methods associated with extracting renewable energy from the marine environment is improving all the time and it is essential that we be able to distinguish between natural and anthropocentric drivers and impacts An overview of current understanding of the environmental implications of marine renewable energy technology is provided Volume 1: Seabird Biodiversity and Human Activities Jaime A. Ramos, Leonel Pereira, 2022-06-30 Seabirds are global travellers connecting oceans and seas all over the world and facing multiple threats at local and global scales Seabirds are long lived top predators reflecting changes at lower trophic levels and are good models to assess ecological changes produced by human societies Thus world wide collaborations are needed to understand seabird ecology and to develop effective conservation measures benefitting both humans and seabird populations This book provides a modern overview on seabird biodiversity studies it begins by covering the most up to date techniques to study seabirds and then focus on pragmatic issues related with interactions between seabirds and humans the use of seabirds as ecological indicators and conservation of seabirds It gives an updated insight on all these topics and highlights gaps that need further development for a comprehensive understanding of the relationships between seabirds and human actions This book covers the response of the seabird research community to a biodiversity crisis aiming to contribute towards environmental sustainability It should provide inspiration to a wide range of professionals and students including the much needed world wide collaboration between research groups and practitioners In this way seabird research and conservation provide an inspiration for the solution of global issues such as climate change *Tropical Cyclones and Associated Impacts* Gabriele Villarini, Gabriel A Vecchi, Enrico Scoccimarro, 2025-01-17 Tropical Cyclones and Associated Impacts A Global Perspective provides a one stop shop for readers interested in the impacts of tropical cyclones capturing the convergence of knowledge across disciplines and fields Chapters in this book provide a coherent structure that reflects the hazards associated with these storms e g storm surge inland flooding and heavy rainfall damaging winds and their impacts on many spheres of our lives e g energy public health This book is geared towards readers who have an interest in tropical cyclones with a broad appeal to different audiences ranging from academia to federal and state agencies dealing with these storms Features a multidisciplinary approach to the science and impacts of tropical cyclones Includes contributions from leading experts in the fields impacted by tropical cyclones Presents case studies to connect the science to practical applications *Mainstreaming Biodiversity into Renewable Power Infrastructure* OECD, 2024-01-30 This report synthesises evidence on biodiversity impacts from renewable power infrastructure with a focus on solar power wind power

and powerlines **Renewable Energies Offshore** C. Guedes Soares,2015-09-07 Renewable Energies Offshore includes the papers presented in the 1st International Conference on Renewable Energies Offshore RENEW2014 held in Lisbon 24-26 November 2014. The conference is a consequence of the importance of the offshore renewable energies worldwide and an opportunity to contribute to the exchange of information on the dev. *Wildlife and Wind Farms - Conflicts and Solutions* Martin Perrow,2019-01-17 Wind farms are an essential component of global renewable energy policy and the action to limit the effects of climate change. There is, however, considerable concern over the impacts of wind farms on wildlife, leading to a wide range of research and monitoring studies, a growing body of literature and several international conferences on the topic. This unique multi-volume work provides a comprehensive overview of the interactions between wind farms and wildlife. Volume 3 documents the current knowledge of the potential effects upon wildlife during both construction and operation of offshore wind farms. An introductory chapter on the nature of wind farms and the legislation surrounding them is followed by a series of in-depth chapters documenting effects on physical processes, atmosphere and ocean dynamics, seabed communities, fish, marine mammals, migratory birds and bats and seabirds. A synopsis of the known and potential effects of wind farms upon wildlife concludes the volume. The authors have been carefully selected from across the globe from the large number of academics, consultants and practitioners now engaged in wind farm studies for their influential contribution to the science. Edited by Martin Perrow and with contributions by 30 leading researchers including G. van Broström, Steven Degraer, Mike Elliot, Andrew Gill, Ommo H. P. Poppe, Georg Nehls and Nicolas Vanermen. The authors represent a wide range of organisations and institutions including the Universities of Gothenburg, Hamburg and Hull, Alfred Wegener Institute, Cefas, UK Research Institute for Nature and Forest, INBO, Royal Belgian Institute of Natural Sciences, Vattenfall and several leading consultancies. Each chapter includes informative figures, tables, colour photographs and detailed case studies, including some from invited authors to showcase exciting new research. Other volumes: Volume 1: Onshore Potential Effects 978 1 78427 119 0; Volume 2: Onshore Monitoring and Mitigation 978 1 78427 123 7; Volume 4: Offshore Monitoring and Mitigation 978 1 78427 131 2.

Renewable Energy Activities within National Jurisdiction Dawoon Jung,2023-09-20 There are various environmental and legal challenges arising from offshore renewable energy activities which were not foreseen at the time of the negotiation of the 1982 United Nations Convention on the Law of the Sea (UNCLOS). This book explores how UNCLOS has evolved to adapt to these new challenges through legal mechanisms and examines what gaps may remain and how they should be filled. The book highlights the process of normative reinforcement in the regulation of offshore renewable energy activities whilst

maintaining the fundamental balance of interests between the coastal State and other States

Interactions of Land, Ocean and Humans Chris Maser, 2014-10-14 Written by Chris Maser one of the architects of the sustainability movement *Interactions of Land Ocean and Humans A Global Perspective* explores a critical number of the myriad aspects that comprise the great reciprocal feedback loops between the mountain peaks the deep sea and everywhere in between Maser's exploration of these connections gives us the tools required to open our imaginations and our scientific literacy offering insights into the relationships between the land sea and people that could influence us toward better decisions The author examines the hydrological cycle hydrological continuum and anthropogenic pollution of various kinds from the atmosphere to deep belowground He also highlights connections by detailing how human behavior changes the atmosphere which changes the oceans which alters the climate which alters the atmosphere and thus the ocean and so on The book then explores the biophysical commonalities between landscapes and seascapes as well as the habitats in each realm It covers marine fisheries marine protected areas oceans as a commodity as part of the global commons as a biophysical living trust for which we are the trustees and the children of today and beyond are the beneficiaries and more Can we arrest this deleterious process Yes but it will take a dramatic shift in human behavior worldwide Why Because just as the collective human behavior and lack of awareness caused the problems in the first place the level of consciousness that caused the problem is not the level of consciousness that can fix it We must shift our thinking from that which is symptomatic to that which is systemic if we are to have a sustainably productive environment through time Maser gives us the understanding of the biophysical interactions among the lands oceans and peoples of the world needed to create sustainable solutions to environmental problems
