Underlying Mechanisms Transitioning Seeds to Seedlings Muhammad Awais Farooq, Ewa M. Kalemba , Alma Balestrazzi, 2025-10-03 The ability of the seed to transform into seedlings and eventually develop into a mature plant is dependent on many complex and interactive mechanisms Successful seed germination and survival necessitate genetic proteomic and metabolic inputs acting in a precise chronological order to leverage germline information storage reserves and nutrients Notwithstanding the advancements being made in seed science there are numerous gaps pertaining to the understanding of seed development interactive signaling networks and metabolic programs involved in improving seed yield and nutritional quality that need to be bridged A holistic approach embracing a multi disciplinary understanding of the

intricate processes undergoing in seed development offers avenues to advance seed science In the recent past there has been research on seed germination under various abiotic stresses that disrupt the normal germination process However an in depth research is needed to understand the molecular mechanisms transforming the seeds into seedlings Therefore the current issue will emphasize the systems level understanding of seed biology with a special focus on physiological genetic transcriptional proteomic and metabolic networks involved in seed development in model and crop plants The articles included will highlight the novel understanding of key mechanisms that underly seed dormancy trigger the growth of the embryo and endosperm and rupture the testa leading to the successful germination of the seeds There is a particular interest in research and systematic reviews which elucidate the agronomic performance physiological bottlenecks hampering germination novel genes and molecular mechanisms involved in the regulation of seed germination the impact of seed quality on the seedling and mature plant health and any other relevant topics that provide insights to improve yield resilience or meal quality
