Childhood Head Injury Maureen Dennis, Harvey S. Levin, 2016-03-23

Childhood head injuries differ from adult head injuries in some significant respects They occur against a background of ongoing physical and cognitive development Cognitive capacities often change with time post injury But for children changes are affected by two processes of functional plasticity one concerned with recovery one with development The impact of the injury is moderated by age developmental stage In recent years there has been a new focus on the longitudinal comparison of children post injury with appropriate control groups Advances in neuropsychological assessment have permitted evaluation with reference to more developmentally suitable norms expanded definitions of outcome have broadened our understanding

of consequences and neuroimaging techniques have enabled the more precise delineation of injury severity the study of structure function outcome relations and the investigation of reorganization of function This special issue offers an overview of cutting edge approaches to the analysis of childhood head injury Autism: The Movement (Sensing) Perspective a Decade Later Elizabeth B. Torres,Jonathan T. Delafield-Butt,Vikram K. Jaswal,Susan Crawford,Ashok Srinivasan,Brittany Travers,2025-08-19 A decade ago in 2013 the Research Topic Autism the Movement Perspective proposed the radical idea that using movement and its sensations could help us better understand the many complex layers of autism spectrum disorders Inspired by earlier work from other fields the work positioned front and center approaches from neuromotor control infusing the research with new computational ideas to study autism across the human lifespan Through the lens of motor variability as a form of kinesthetic reafference causal inference and predictive codes the Research Topic brought together a group of researchers parents practitioners and self advocates to rethink autism as sensory motor differences contributing to the emergence of powerful coping mechanisms that advanced our understanding of how the human brain develops and functions Today with new improvements in biosensing technologies and neuroscience and the embodied and affective psychology on which development is based we revisit this Research Topic approaching autism anew through a modernized lens of precision aimed at enabling socio motor agency A Guide to Clinical Assessment and Professional Report Writing in Speech-Language Pathology Renee Fabus,2024-06-01 Learning to assess speech and language disorders and write diagnostic reports may be an overwhelming experience especially when most texts don t cover both topics at once With that in mind A Guide to Clinical Assessment and Professional Report Writing in Speech Language Pathology Second Edition combines the latest assessment protocols and diagnostic techniques with vital diagnostic report writing tools into a single definitive guide Cyndi Stein Rubin Renee Fabus and their contributors recognize that clinical assessment is inextricably linked to report writing and have updated this Second Edition to synthesize the two Following the introductory chapters which discuss the basics of assessment and report writing each subsequent chapter focuses on a particular disorder provides in depth assessment tools and presents a corresponding sample report Key Features An inventory and explanation of formal and informal assessment measures A glossary of key vocabulary Sample case histories with assessment tools Relevant and useful interview questions Each disorder s background and characteristics Assessment parameters A differential diagnosis section A model report The accessible format of A Guide to Clinical Assessment and Professional Report Writing in Speech Language Pathology Second Edition will help students learn how to assess and document speech and language disorders and will also make for a perfect reference for them as clinicians for years to come The Journal of Speech and Hearing Disorders ,1988 List of members 1937 Speech Therapy Jennifer Warner,Betty Byers Brown,Elspeth McCartney,1984 *Numerical Development - From cognitive functions to neural underpinnings* Korbinian Moeller,Elise Klein,Klaus F Willmes - von Hinckeldey,Karin Kucian,2015-02-24 Living at the beginning of the 21st century requires being

numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers
