

A Guide to Modern Econometrics, 5th edition Answers to selected exercises - Chapter 2

Exercise 2.1

- a. See page 7-9.
- b. Assumption (A1) and (A2), see page 15.
- c. See page 25. We also require assumptions (A3) and (A4) to make the confidence interval approximately valid. We need (A3)-(A4) to make sure that $sc(b_2)$ is the correct standard error. In small samples, the confidence interval is exactly valid if (A5), normality of the error terms, is imposed too.

- d. The hypothesis that $\beta_3 = 1$ can be tested by means of a t -test. The test statistic is

$$t = \frac{b_3 - 1}{sc(b_3)},$$

which – under the null hypothesis – has an approximate standard normal distribution (assumptions (A1)-(A4)). At the 95% confidence level, we reject the null if $|t| > 1.96$.

- e. The hypothesis that $\beta_2 + \beta_3 = 0$ can also be tested by means of a t -test. The test statistic is

$$t = \frac{b_2 + b_3}{sc(b_2 + b_3)}.$$

See Subsection 2.5.3 for an explanation on how to obtain the standard error. (Most software will do this automatically.)

- f. The joint hypothesis that $\beta_2 = \beta_3 = 0$ can be tested by means of an F -test. The test statistic is most easily obtained from the R^2 and we use (2.61) (or – more generally – (2.59)). We compare the test statistic with the critical values from an F distribution with 2 (the number of restrictions) and $N - 3$ degrees of freedom.
- g. For consistency we need assumptions (A6) and (A7). The first of these is often referred to as a “regularity condition”. See page 34.
- h. This is an example of exact multicollinearity. Estimation will break down. Regression software will either give an error message (“singular matrix”) or automatically drop either x_{i2} or x_{i3} from the model.

Designed to be an accessible resource, the text explains in clear language why things are being done and how previous material informs a

current argument The style is deliberately informal with numbered theorems and lemmas avoided However very few technical results are quoted without some form of explanation demonstration or proof The author a noted expert in the field covers a wealth of topics including simple regression basic matrix algebra the general linear model distribution theory the normal distribution properties of least squares unbiasedness and efficiency eigenvalues statistical inference in regression t and F tests the partitioned regression specification analysis random regressor theory introduction to asymptotics and maximum likelihood Each of the chapters is supplied with a collection of exercises some of which are straightforward and others more challenging This important text Presents a guide for teaching econometric methods to undergraduate and graduate students of economics statistics or finance Offers proven classroom tested material Contains sets of exercises that accompany each chapter Includes a companion website that hosts additional materials a solution manual and lecture slides Written for undergraduates and graduate students of economics statistics or finance An Introduction to Econometric Theory is an essential beginner's guide to the underpinnings of econometrics *Foundations of Modern Econometrics* Ragnar Frisch, 1995 These two volumes convey the writings of Ragnar Frisch 1895 1973 who together with Jan Tinbergen was the first winner of the Nobel Prize in economics He played a major role in the foundation of econometrics as a discipline partly through his position as editor of *Econometrica*
