HOW TO POSE... HEADSHOTS & HANDS

Digital  
Camera  
World

## LOOK DOWN

Ask your model to look down to give the shot a thoughtful mood and focus attention on the hands.  
Top tip: Use strong eye makeup and shoot this from above to get a better view of the lashes.

## WANDERING HANDS

Ask your model to bring their hands up to their face, with fingers on one hand resting on the palm of the other, and chin lowered down.  
Top tip: Whites under each iris give eyes impact.

## SIT DOWN

Ask the model to sit side-on, resting the elbows on the knees and with hands underneath the chin.  
Top tip: Hands create a nicer shape if side-on rather than flat, with fingers gently curled.

## ONE-HANDED

Ask your model to stand side-on, with her chin angled towards the front shoulder, then bring one hand up to delicately brush the cheek.  
Top tip: Crop the shot close to the hairline.

## SIMPLE BUT STRONG

A straightforward close-up is classic. Ask the model to look directly at the camera, lips slightly parted.  
Top tip: Try a very shallow depth of field for this; as they're straight on, both eyes should be sharp.

## WINDSWEPT

Ask the model to stand side-on, then use an electric fan to blow the hair across the face.  
Top tip: Moving hair makes composing, focusing and expressions tricky, so take plenty of shots.

## ENLIGHTENED

Ask your model to look up and to the side, and bring the hands up to the face, to create a reflective mood.  
Top tip: Eyes right suggests a more hopeful mood, while eyes left looks more contemplative.

## PERFECT SYMMETRY

Bring both hands together at the wrist with fingers on each cheek to create a symmetrical frame.  
Top tip: Angle the face towards your light source for good catchlights and flattering light.

## FRAME THE FACE

Bring one hand up to the chin, with the other arm resting on top of the head to frame the face.  
Top tip: Think about how to pose the hair to create a natural frame for the face.

*Master Posing Guide for Portrait Photographers* J. D. Wacker, 2012. Updated with new photos and a revised text to reflect the latest techniques and styles in posing and portraiture, this second edition of a bestselling book is a welcome addition to the photography libraries of both professional and amateur photographers. Using a method called the three Cs of posing—compliment the subject, correct any appearance issues, and convey something to the viewer—the author provides step-by-step instructions on capturing natural-looking poses in endless varieties. Whether the subject is an athlete, a judge, a beauty queen, a mom, or a musician, this book shows how refined.

**Lighting Essentials** Don Giannatti, 2012-04-01. The core goal of photography is representing subjects that have depth and texture in a medium that inherently lacks both those qualities, and this book shows the best way to rise to that challenge through the careful application and capture of lighting. It demonstrates how to accentuate or minimize textures, add or subtract highlights, and create or combat shadows to showcase the subjects in the best way and create the illusion of a third dimension in the images. Exploring techniques for lighting portraits, still life, subjects, nature, images, and architectural shots, both studio and location lighting are covered in detail. The book teaches photographers how to study their subjects with all of the textures, colors, shapes, and surfaces they have, then visualize the image as a finished photograph before the photography actually begins. With chapters that thoroughly cover the science of lighting and visualization, photographers can apply that knowledge and successfully create artful images.

**Shaping Light** Glenn Rand, Tim Meyer, 2014-05-13. While light is required to make a photograph, light alone is not enough. More often, it is the way the light has been modified and shaped that brings an image to life. In this book, Glenn Rand and Tim Meyer offer a comprehensive approach to the tools and techniques photographers can use to shape the light, creating the style, energy, emotion, and feeling that make a photograph exceptional. Clear text is paired with ample before and after images and diagrams to make learning easy. Beginning with the physics of light, the authors show you how to predict light's interaction with the surface of the subject/object you are photographing. Based on this, you can begin to make informed decisions about what kinds of modifiers will help you achieve the look you want. Using softboxes, umbrellas, masks, gels, reflectors, and more, you'll learn to precisely control the light's diffused edge and ratio for precise, flawless results.
