Writing Technology Christina Haas,2013-11-05 Academic and practitioner journals in fields from electronics to business to language studies as well as the popular press have for over a decade been proclaiming the arrival of the computer revolution and making far reaching claims about the impact of computers on modern western culture Implicit in many arguments about the revolutionary power of computers is the assumption that communication language and words are intimately tied to culture that the computer s transformation of communication means a transformation a revolutionizing of culture Moving from a vague sense that writing is profoundly different with different material and technological tools to an understanding of how such tools can and will change writing writers written forms and writing s functions is not a simple matter Further the question of whether and how changes in individual writers experiences with new technologies translate into large scale cultural revolutions remains unresolved This book is about the relationship of writing to its technologies It uses history theory and empirical research to argue that the effects of computer technologies on literacy are complex always incomplete and far from unitary despite a great deal of popular and even scholarly discourse about the inevitability of the computer revolution The author argues that just as computers impact on discourse discourse itself impacts technology and explains how technology is used in educational settings and beyond
