Engineering Psychology and Cognitive Ergonomics Don Harris, Wen-Chin Li, 2023-07-08 This two volume set LNCS 14017 14018 constitutes the thoroughly refereed proceedings of the 20th International Conference on Engineering Psychology and Cognitive Ergonomics EPCE 2023 held as part of HCI International 2023 which took place in Copenhagen Denmark during July 23 28 2023 A total of 1578 papers and 396 posters have been accepted for publication in the HCII 2023 proceedings from a total of 7472 submissions The papers included in the HCII EPCE volume set were organized in topical sections as follows Part I Stress fatigue and mental workload human performance and error management resilience and performance in demanding contexts Part II Human factors in aviation human factors in operations management human centered design of autonomous systems

Human Performance on the Flight Deck Don Harris, 2016-12-05 Taking an integrated systems approach to dealing exclusively with the human performance issues encountered on the flight deck of the modern airliner this book describes the inter relationships between the various application areas of human factors recognising that the human contribution to the operation of an airliner does not fall into neat pigeonholes The relationship between areas such as pilot selection training flight deck design and safety management is continually emphasised within the book It also affirms the upside of human

factors in aviation the positive contribution that it can make to the industry and avoids placing undue emphasis on when the human component fails The book is divided into four main parts Part one describes the underpinning science base with chapters on human information processing workload situation awareness decision making error and individual differences Part two of the book looks at the human in the system containing chapters on pilot selection simulation and training stress fatigue and alcohol and environmental stressors Part three takes a closer look at the machine the aircraft beginning with an examination of flight deck display design followed by chapters on aircraft control flight deck automation and HCI on the flight deck Part four completes the volume with a consideration of safety management issues both on the flight deck and across the airline the final chapter in this section looks at human factors for incident and accident investigation The book is written for professionals within the aviation industry both on the flight deck and elsewhere for post graduate students and for researchers working in the area *Human Factors for Aviation*, 1996 Learning Through Practice Stephen

Billett, 2010-06-02 Practice based learning the kind of education that comes from experiencing real work in real situations has always been a prerequisite to qualification in professions such as medicine However there is growing interest in how practice based models of learning can assist the initial preparation for and further development of skills for a wider range of occupations Rather than being seen as a tool of first time training it is now viewed as a potentially important facet of professional development and life long learning This book provides perspectives on practice based learning from a range of disciplines and fields of work The collection here draws on a wide spectrum of perspectives to illustrate as well as to critically appraise approaches to practice based learning The book's two sections first explore the conceptual foundations of learning through practice and then provide detailed examples of its implementation Long standing practice based approaches to learning have been used in many professions and trades Indeed admission to the trades and major professions e.g. medicine law accountancy can only be realised after completing extended periods of practice in authentic practice settings However the growing contemporary interest in using practice based learning in more extensive contexts has arisen from concerns about the direct employability of graduates and the increasing focus on occupation specific courses in both vocations and higher education It is an especially urgent issue in an era of critical skill shortages rapidly transforming work requirements and an aging workforce combined with a looming shortage of new workforce entrants We must better understand how existing models of practice based learning are enacted in order to identify how they can be applied to different kinds of employment and workplaces The contributions to this volume explore ways in which learning through practice can be conceptualised enacted and appraised through an analysis of the traditions purposes and processes that support this learning including curriculum models and pedagogic practices *Aviation and Human Factors* Jose Sanchez-Alarcos, 2019-06-19 Air safety is right now at a point where the chances of being killed in an aviation accident are far lower than the chances to winning a jackpot in any of the major lotteries However keeping or improving that performance level requires a critical

analysis of some events that despite scarce point to structural failures in the learning process The effect of these failures could increase soon if there is not a clear and right development path This book tries to identify what is wrong why there are things to fix and some human factors principles to keep in aircraft design and operations Features Shows through different events how the system learns through technology practices and regulations and the pitfalls of that learning process Discusses the use of information technology in safety critical environments and why procedural knowledge is not enough Presents air safety management as a successful process but at the same time failures coming from technological and organizational features are shown Offers ways to improve from the human factors side by getting the right lessons from recent events

Pilot Mental Health Assessment and Support Robert Bor, Carina Eriksen, Margaret Oakes, Peter Scragg, 2016-12-08

The book presents an authoritative comprehensive and practical guide to modern evidence based practice in the field of mental health assessment treatment and care It features a range of contributions from aviation related organisations including different skills and methods that can be used for the clinical assessment of pilots *International Encyclopedia of Ergonomics and Human Factors* Waldemar Karwowski, 2001 The Handbook of Operator Fatigue Gerald Matthews, P.A. Hancock, 2017-11-01 Fatigue is a recognized problem in many facets of the human enterprise It is not confined to any one area of activity but enters all situations in which humans have to perform for extended intervals of time Most problematic are the circumstances in which obligatory action is continuous and the results of failure are evidently serious or even catastrophic Therefore the modern media especially highlights fatigue related failures in industries such as transportation materials processing and healthcare It can be and indeed is no coincidence that most of the spectacular failures in process control that have resulted in the world's largest industrial accidents have occurred in the small hours of the morning when the circadian rhythm is lowest and operator fatigue itself peaks While there have been legislative efforts made at state federal and international levels to regulate working hours of employees the appropriate implementation of such legislation is still a long way off The Handbook of Operator Fatigue provides a comprehensive account of the subject to serve as the definitive reference work for researchers students and practitioners alike The volume features 30 chapters written by experts from around the world to address each important facet of fatigue including the scale of the fatigue problem Section I the nature of fatigue Section II how to assess fatigue Section III the impact of fatigue on health Section IV fatigue in the workplace Section V the neurological basis of fatigue VI sleep disorders VII and the design of countermeasures to fatigue VIII
