Weed Science Godfrey Pearlson, 2020-07-11 WHAT DO WE KNOW ABOUT MARIJUANA AND HOW DO WE KNOW IT Marijuana is the most frequently consumed illicit drug worldwide with over 158.8 million users according to the UN. Responding to public pressure the US federal government is likely to legalize recreational marijuana within the next few years. With increasing numbers of people using cannabis both medically and recreationally there are many looming questions that only science can answer. These include: What's likely to happen both good and bad if the US legalizes marijuana? What are some simple science based rules to separate fact from fiction and to help guide policy in the highly contentious marijuana debate? Exactly what is cannabis doing in the brain that gets us high? A journey through THC neuroscience. Does cannabis really have medical benefits? What's the evidence? To what extent does cannabis impair driving? Can smoking marijuana in adolescence affect IQ or risk for developing schizophrenia? Is marijuana safe to use during pregnancy? Reviews the endocannabinoid system and why our bodies are full of weed receptors. Introduces readers to the various forms of marijuana: flower, dabs, hash, edibles, shatter, vapes, tinctures, oils, and synthetics. THC, CBD, and terpenes. Demonstrates how and why cannabis affects different people very differently. Discusses how MRI and PET scans can help show the effects of marijuana on the brain. Discusses long term effects of adolescent and adult cannabis use. Examines the evidence for cannabis's role in increasing the risk for schizophrenia like illnesses.

Salvia Biotechnology Vasil Georgiev, Atanas Pavlov, 2018-03-19 The genus *Salvia* represents nearly 1 000 species that are widely distributed around the world. It is the largest in the Lamiaceae family. Traditionally infusions of *Salvia* species have been widely used to treat oral inflammation, throat and headaches, and digestive disturbances in various folklore and ethno medicine practices worldwide. The antispasmodic, antiseptic, and hypoglycemic effects of their extracts have been recognized by the ancient healers a long time ago, before the development of modern medicine. With the advances in phytochemistry and pharmacology, terpenes, polyphenols, and volatile compounds have been recognized as the source of bioactivity in *Salvia* extracts. Nowadays, because of their valuable pharmaceutical and nutraceutical properties, many *Salvia* species have been widely used as ingredients in food, pharmacy, and cosmetic industries. The economic importance of *Salvia* plants continues to increase, following closely the growing interest in the concept for modern healthy lifestyle based on prevention by consuming quality foods and nutraceutical supplements of natural origin. However, the growing demand has led to overexploitation of natural habitats, and in the last few years many wild growing *Salvia* species have shrunk or fallen under threat. Obviously, to deal with that problem and to prevent ecological crisis, there is an urgent need for alternative renewable sources of *Salvia* biomass. Plant biotechnology can provide a wide range of tools for development of economically feasible, continuous production of standardized, valuable phytochemicals. Plant in vitro culture technology is a powerful method for continuous production of plant secondary metabolites under controlled conditions, recently adapted to various *Salvia* species. *Salvia* in vitro systems are harmless to natural plant populations and can be grown independently of environmental factors, geographical latitude, climatic change, and seasonal variations. Several bioactive

metabolites from rare and endangered Salvia plants can be produced by employing different plant in vitro systems. However, the researches on development of large scale biotechnology based on Salvia in vitro systems are still in early stages and many points still have to be addressed before the commercialization to take place. In this book, we intend to summarize the recent achievements in research with Salvia in vitro systems as biological matrixes for the production of pharmaceutically important secondary metabolites. Further, we invited leading experts to present their recent studies on phytochemistry, ethnobotanical and ethnopharmacological aspects of genus Salvia. Safety and legal issues related to implementation of Salvia plants and in vitro cultures, extracts in foods, cosmetics and pharmaceutical products will be discussed as well. **Analyzing**
