The long and short of mental time travel--self-projection over time-scales large and small James M. Broadway, Claire M. Zedelius, Jonathan W. Schooler, Simon Grondin, 2015-07-02 Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days months years and beyond This Research Topic supposes that broadly speaking the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales Dealing with conceptual time mental time travel also called mental simulation self projection episodic semantic memory prospection foresight allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge Moreover contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors But what might such notions have to do with experienced durations of events lasting milliseconds up to a few seconds during the so called present moment of perception action cycle time This Research Topic is organized around the general premise that by considering how mental time travel might scale down to time perception and vice versa no less progress and integrative synthesis within and across scientific domains might be facilitated Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus like feedforward feedback system for goal pursuit As an example it is notable that the duality of prospection and semantic episodic memory operating at conceptual time scales has an analogue in perception action cycle time namely the interplay of anticipatory attention and working memory Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format

accepted by the journal Original Research Methods Hypothesis Theory Reviews etc which might speak to questions about time and temporal phenomena at long and or short time scales

The Cambridge Handbook of the Imagination Anna Abraham, 2020-06-18 The human imagination manifests in countless different forms We imagine the possible and the impossible How do we do this so effortlessly Why did the capacity for imagination evolve and manifest with undeniably manifold complexity uniquely in human beings This handbook reflects on such questions by collecting perspectives on imagination from leading experts It showcases a rich and detailed analysis on how the imagination is understood across several disciplines of study including anthropology archaeology medicine neuroscience psychology philosophy and the arts An integrated theoretical empirical applied picture of the field is presented which stands to inform researchers students and practitioners about the issues of relevance across the board when considering the imagination With each chapter the nature of human imagination is examined what it entails how it evolved and why it singularly defines us as a species

Vividness, Consciousness, and Mental Imagery Amedeo D'Angiulli, 2021-04-14 Today in many studies mental images are still either treated as conscious by definition or as empirical operations implicit to completing some type of task such as the measurement of reaction time in mental rotation an underlying mental image is assumed but there is no direct determination of whether it is conscious or not The vividness of mental images is a potentially helpful construct which may be suitable as it may correspond to consciousness or aspects of the consciousness of images In this context a complicating factor seems to be the surprising variety in what is meant by the term vividness or how it is used or theorized To fill some of the gaps the goal of the present Special Issue is to create a publication outlet where authors can fully explore through sound research the missing theoretical and empirical links between vividness consciousness and mental imagery across disciplines neuroscience psychology philosophy cognitive science to mention the most obvious ones as well as transdisciplinary methodological single combined or multiple approaches

Hume's Imagination Tito Magri, 2022 Tito Magri proposes a new systematic interpretation of David Hume's account of the imagination in his Treatise of Human Nature This has revisionary implications for the understanding of Hume's philosophy particularly his philosophy of mind naturalism epistemology and stance to scepticism

Imagination Jim Davies, 2019-11-05 The first ever book on the science of imagination which sheds light on both the complex inner workings of our mind and the ways in which we can channel imagination for a better life We don't think of imagination the way that we should The word is often only associated with children artists and daydreamers but in reality imagination is an integral part of almost every action and decision that we make Simply put imagination is a person's ability to create scenarios in his or her head this can include everything from planning a grocery list to honing a golf swing to having religious hallucinations And while imagination has positive connotations it can also lead to decreased productivity and cooperation or worse the continuous reliving of past trauma The human brain is remarkable in its ability to imagine it can imagine complex possible futures fantasy worlds or tasty meals We can use our imaginations to make us relaxed or anxious

We can imagine what the world might be and construct elaborate plans People have been fascinated with the machination of the human brain and its ability to imagine for centuries There are books on creativity dreams memory and the mind in general but how exactly do we create those scenes in our head With chapters ranging from hallucination and imaginary friends to how imagination can make you happier and more productive Jim Davies Imagination will help us explore the full potential of our own mind *The Oxford Handbook of Personality and Social Psychology* Kay Deaux, Mark

Cognitive Approach to Ernest Hemingway's Short Fiction Gabriela Tucan, 2021-04-09 How do readers make sense of Hemingway s short stories How is it possible that the camera like quality of his narrative can appeal to our senses and arouse

our emotions How does it capture us With reserved narrators and protagonists engaged in laconic dialogs his texts do not seem to say much This book consciously revisits our responses to the Hemingway story a belated response to his invitation to discover what lies beneath the surface of his iceberg What this pioneering critical endeavor seeks to understand is the thinking required in reading Hemingway s short fiction It proposes a cognitively informed model of reading which questions the resources of the reader s imaginative powers The cognitive demonstrations here are designed to have potentially larger implications for the short story s general mode of knowing Drawing from both cognitively oriented poetics and narratology in equal measure this book explains what structures our interaction with literary texts **Cognition** Thomas A.
