The Reconstruction of Natural Zeolites Habib Ghobarkar,2003 Zeolites have unusual properties and as a result they are some of the most interesting inorganic materials known today In contrast to conventional nanomaterials zeolites exhibit a long term stable inner void system on the nanometer scale and their properties are almost independent from the crystal size The Reconstruction of Natural Zeolites summarizes the known properties of natural zeolites and importantly shows how they can be synthesized by simulating the conditions of natural formation Systematically a direct correlation between the glassy precursor composition and that of the zeolite product is established The zeolite crystal morphology obtained at given synthesis conditions allows direct conclusions on the conditions of formation in nature This book is a valuable practical guide and tool for solid state chemists physicists mineralogists and engineers It will be of interest to materials scientists zeolite researchers mineralogists physical chemists bio materials scientists inorganic chemists inorganic synthesis engineers advanced students in these disciplines The Reconstruction of Natural Zeolites is written in a concise way in order to make it more accessible to the interested reader The images convey an impression of the beauty of this fascinating domain of advanced inorganic materials for high technology
