Pharmaceutical Formulation Geoffrey D Tovey, 2018-06-25 Formulation is a key step in the drug design process where the active drug is combined with other substances that maximise the therapeutic potential, safety, and stability of the final medicinal product. Modern formulation science deals with biologics as well as small molecules. Regulatory and quality demands, in addition to advances in processing technologies, result in growing challenges as well as possibilities for the field. *Pharmaceutical Formulation* provides an up-to-date source of information for all who wish to understand the principles and practice of formulation in the drug industry. The book provides an understanding of the links between formulation theory and the practicalities of processing in a commercial environment, giving researchers the knowledge to produce effective pharmaceutical products that can be approved and manufactured. The first chapters introduce readers to different dosage forms, including oral liquid products, topical products, and solid dosage forms such as tablets and capsules. Subsequent chapters cover pharmaceutical coatings, controlled release drug delivery, and dosage forms designed specifically for paediatric and geriatric patients. The final chapter provides an introduction to the vital role intellectual property plays in drug development. Covering modern processing methods and recent changes in the regulatory and quality demands of the industry, *Pharmaceutical Formulation* is an essential up-to-date resource for students and researchers working in academia and in the pharmaceutical industry.
