Molecular Biology Abraham Marcus,1989-01-01 The Biochemistry of Plants Volume 15 Molecular Biology presents information pertinent to gene expression cytoskeletal proteins and hydroxyproline rich glycoprotein This book discusses the specific gene systems and examines the regulatory regions within the genes Organized into 17 chapters this volume starts with an overview of the important mechanism for regulating gene expression which is significant in the selective turnover of gene products This book then proceeds with a discussion of the concept of protein degradation and the extracellular carriers of genetic information Other chapters review the viral and plasmid systems which are relevant to plants This text discusses as well the phenotypic changes in plants including plant genetic tumor and habituated plant tissues that exhibit hormone autotrophic growth The final chapter examines the importance of genetic manipulation at the cellular level via protoplast fusion cell selection and transformation Biologists biochemists enzymologists biophysicists and plant scientists will find this book extremely useful *Tissue Culture in Forestry and Agriculture* Randolph R. Henke,Karen W. Hughes,Milton J. Constantin,Alexander Hollaender,Claire M. Wilson,2013-11-11 This symposium is the third in a series featuring the propagation of higher plants through tissue culture The first of these symposia entitled A Bridge Between Research and Application was held at the University in 1978 and was published by the Technical Information Center Department of Energy The second symposium on Emerging Technologies and Strategies was held in 1980 and published as a special issue of Environmental and Experimental Botany One of the aims of these symposia was to examine the current state of the art in tissue culture technology and to relate this state of technology to practical applied and commercial interests Thus the third of this series on development and variation focused on embryogenesis in culture how to recognize it factors which affect embryogenesis use of embryogenic systems etc and variability from culture A special session on woody species again emphasized somatic embryogenesis as a means of rapid propagation This volume emphasizes tissue culture of forest trees All of these areas we feel are breakthrough areas in which significant progress is expected in the next few years **In Vitro Embryogenesis in Plants** Trevor A. Thorpe,2012-12-06 In vitro Embryogenesis in Plants is the first book devoted exclusively to this topic As the ultimate demonstration of totipotency in plants somatic and haploid embryogenesis is of vital importance to all those working on or interested in basic and applied aspects of plantlet information and regeneration The text includes comprehensive reviews written by experts on all facts of in vitro and in vivo embryogenesis Some chapters deal with the morphogenic structural and developmental physiological and biochemical and molecular biological aspects of the subject Chapters are also devoted to haploid embryogenesis asexual embryogenesis in nature zygotic embryogenesis and zygotic embryo culture Detailed tables summarizing successful somatic embryogenesis in all vascular plants are also included This book therefore

brings together previously scattered information to provide an indispensable reference book for both active researchers graduate students and anyone interested in this aspect of tissue culture technology and plant development *Manual of Industrial Microbiology and Biotechnology* Richard H. Baltz, Arnold L. Demain, Julian E. Davies, 2010-03-25 A rich array of methods and discussions of productive microbial processes Reviews of the newest techniques approaches and options in the use of microorganisms and other cell culture systems for the manufacture of pharmaceuticals industrial enzymes and proteins foods and beverages fuels and fine chemicals and other products Focuses on the latest advances and findings on the current state of the art and science and features a new section on the microbial production of biofuels and fine chemicals as well as a stronger emphasis on mammalian cell culture methods Covers new methods that enhance the capacity of microbes used for a wide range of purposes from winemaking to pharmaceuticals to bioremediation at volumes from micro to industrial scale **Applied Mutation Breeding for Vegetatively Propagated Crops** C. Broertjes, A.M. van Harten, 2013-10-22

When the first edition of this book appeared in 1978 it was warmly received Most readers and reviewers especially valued the extensive coverage of the literature in the chapters dealing with the different crops a valuable and timely addition to plant breeders and of outstanding value to breeders of ornamental plants The book's special strength resides in the extensive review of literature International Journal for Breeding Research This is also reflected by the many times that the work has been referred to in other publications This new edition provides plant breeders as well as scientists with an up to date overview of methods and results of the application of mutation breeding in order to genetically improve vegetatively propagated crops General principles and background information about mutation breeding in general methods of treatment material to be treated and results are discussed in the introductory chapters followed by a description of the specific situation in each of the vegetatively propagated crops ever used in a mutation breeding project This volume brings together all the important and relevant literature in the field It provides a complete account of mutation breeding of vegetatively produced crops presenting conclusions about the value of the method its possibilities limitations and shortcomings and the possible difficulties of further application in various crops The initial chapters deal with the interactions between mutagenic treatment and plant material such as aspects of mutagenic treatment post irradiation behaviour of shoot apices and adventitious bud techniques All available literature is then discussed crop by crop and critically evaluated Almost 1700 references are covered and whenever possible suggestions for more efficient application of mutation breeding methods are given **Plant Breeding** M.D. Hayward, N.O. Bosemark, T. Romagosa, 2012-12-06 Our requirement for plant breeders to be

successful has never been greater However one views the forecasted numbers for future population growth we will need in the immediate future to be feeding clothing and housing many more people than we do inadequately at present Plant breeding represents the most valuable strategy in increasing our productivity in a way that is sustainable and environmentally sensitive Plant breeding can rightly be considered as one of the oldest multidisciplinary subjects that is

known to humans It was practised by people who first started to carry out a settled form of agriculture The art as it must have been at that stage was applied without any formal underlying framework but achieved dramatic results as witnessed by the forms of cultivated plants we have today We are now learning how to apply successfully the results of yet imperfect scientific knowledge This knowledge is however rapidly developing particularly in areas of tissue culture biotechnology and molecular biology Plant breeding s inherent multifaceted nature means that alongside obvious subject areas like genetics we also need to consider areas such as statistics physiology plant pathology entomology biochemistry weed science quality seed characteristics repro ductive biology trial design selection and computing It therefore seems apparent that modern plant breeders need to have a grasp of wide range of scientific knowledge and expertise if they are successfully to a exploit the techniques protocols and strategies which are open to them

Vol. 1-2: Techniques for Propagation and Breeding David A. Evans, Philip V. Ammirato, William R. Sharp, Yasuyuki Yamada, 1984

Experiments in Plant Tissue Culture John H. Dodds, Lorin W. Roberts, 1995-01-27 This new edition of a highly successful book has been completely revised and updated and features new illustrations and experiments

Tissue culture as a plant production system for horticultural crops Richard H. Zimmerman, Robert J. Griesbach, Freddi A. Hammerschlag, R.H. Lawson, 2012-12-06

In 1980 a conference on tissue culture of fruit crops was held at Beltsville to summarize the current status of this technology and to stimulate interest in it among research scientists students and commercial producers in the U S Interest in that conference and the proceedings from it far exceeded the expectations of the organizing committee Since that time micropropagation of fruit crops in the U S has increased significantly but still lags far behind applications to production of ornamental plants Within the past two years a number of new laboratories have been established and some of the existing laboratories have expanded to a size far larger than any previously anticipated Creation of new laboratories capable of producing more than 400 000 plants per week will test the ingenuity of laboratory managers

and the skills of marketing departments In recent years numerous symposia have been held on various aspects of biotechnology and genetic engineering Although micro propagation is the key to providing large numbers of genetically engineered plants it is a topic that has been relegated to a minor position or ignored completely at such meetings Accordingly the time seemed propitious for a conference devoted solely to all aspects of micropropagation as applicable to horticultural crops

Molecular Methods in Plant Pathology Uma. S. Singh, Rudra P. Singh, 2017-12-14 Molecular Methods in Plant Pathology covers methods in phytopathology at the molecular level including PCR techniques electron microscopy tissue culturing and the cloning of disease resistant genes Phytopathologists botanists horticulturists and anyone working in agriculture will find this a useful reference on biophysical biochemical biomolecular and biotechnological methods

High-Tech and Micropropagation I Y. P. S. Bajaj, 2012-12-06 Presented here is another classic from this series and deals with general aspects of micropropagation of plants for commercial exploitation It includes chapters on setting up a commercial laboratory meristem culture somatic embryogenesis factors affecting micropropagation disposable vessels vitrification acclimatization induction of rooting artificial substrates cryopreservation and artificial seed Special emphasis is given on modern approaches and developing technologies such as automation and bioreactors robots in transplanting artificial intelligence information management and computerized greenhouses for en masse commercial production of plants

Breeding Field Crops John M. Poehlman, 2013-04-17 While preparing the first edition of this textbook I attended an extension short course on writing agricultural publications The message I remember was select your audience and write to it There has never been any doubt about the audience for which this textbook was written the introductory course in crop breeding In addition it has become a widely used reference for the graduate plant breeding student and the practicing plant breeder In its preparation particular attention has been given to advances in plant breeding theory and their utility in plant breeding practice The blend of the theoretical with the practical has set this book apart from other plant breeding textbooks The basic structure and the objectives of the earlier editions remain unchanged These objectives are 1 to review essential features of plant reproduction Mendelian genetic principles and related genetic developments applicable in plant breeding practice 2 to describe and evaluate established and new plant breeding procedures and techniques and 3 to discuss plant breeding objectives with emphasis on the importance of proper choice of objective for achieving success in variety development Because plant breeding activities are normally organized around specific crops there are chapters describing breeding procedures and objectives for the major crop plants the crops were chosen for their economic importance or diversity in breeding systems These chapters provide a broad overview of the kinds of problems with which the breeder must cope

NASA Conference Publication ,1987 **Biotechnology in Plant Science** Milton Zaitlin, 2012-12-02

Biotechnology in Plant Science Relevance to Agriculture in the Eighties reflects the exchange of ideas among the participants in a symposium held at Cornell University in 1985 This reference highlights advances in and applications of biotechnology

Applications include plant breeding and agricultural business This book is comprised of research articles emphasizing available technologies including tissue culture and plant transformation Papers included in this reference also cover topics on genes for transformation and plant molecular biology and agrichemicals As this reference focuses more on tissue culture it specifically explains plant regeneration and genetic events The book discusses the roles of various institutions and sectors in advancing biotechnology and related fields It also provides two panel discussions on the implications of the technological advances in conjunction with the issues about these innovations Researchers lecturers and students in biotechnology and agriculture will find this anthology an excellent reference for further studies and research in biotechnology and its applications to agriculture

Crops I Y. P. S. Bajaj, 2012-12-06 Production of food to meet the demands of an ever increasing human population in the world is the major task and challenge to agriculture today The conventional methods of plant breeding alone can no longer cope with the situation The success of any crop improvement program depends on the extent of genetic variability in the base population but due to denuding of forests and agricultural land the naturally occurring pool of germplasm is being depleted An urgent need is therefore apparent to create new variability and increase the genetic base of agricultural crops Agricultural biotechnology has progressed to a stage in the production of plants where specific characteristics to improve their yield appearance disease resistance nutritional quality and adaptation to adverse soil conditions can be built into the seed This concept of built in quality implies a continuous scientific endeavour to improve plant characters using a wide range of possibilities and it also implies a scrutiny of the materials and methods available in the world today

Plant Biotechnology and Molecular Markers S. Srivastava, A. Narula, 2006-01-16 The genesis of the volume Plant Biotechnology and Molecular Markers has been the occasion of the retirement of Professor Sant Saran Bhojwani from the Department of Botany University of Delhi For Professor Bhojwani retirement only means relinquishing the chair as being a researcher and a teacher which has always been a way of life to him Professor Bhojwani has been an ardent practitioner of modern plant biology and areas like Plant Biotechnology and Molecular Breeding have been close to his heart The book contains original as well as review articles contributed by his admirers and associates who are experts in their area of research While planning this contributory book our endeavour has been to incorporate articles that cover the entire gamut of Plant Biotechnology and also applications of Molecular Markers Besides articles on in vitro fertilization and micropropagation there are articles on forest tree improvement through genetic engineering Considering the importance of conservation of our precious natural wealth one article deals with cryopreservation of plant material Chapter on molecular marker considers DNA indexing as markers of clonal fidelity of in vitro regenerated plants and prevention against bio piracy A couple of write ups also cover stage specific gene markers DNA polymorphism and genetic engineering including raising of stress tolerant plants to sustain productivity and help in reclamation of degraded land
