Environmental Science and Technology I. Johnsen, S.E. Jorgensen, 1989-01-01 Since the publication of the first edition of this book in 1981 it has been widely used as a textbook at university level for graduate courses in environmental management environmental science and environmental technology for non engineers As this second edition is significantly improved it should find an even wider application than the first In the second edition the section on ecotoxicology and effects on pollutants has been expanded considerably as has Chapter 4 on ecological principles and concepts Further improvement has been made by the addition of a section on ecological engineering the application of ecologically sound technology in ecosystems and an appendix on environmental examination of chemicals The problems of agricultural waste have been included in Part B and in Chapter 6 on waste water treatment several pages have been added about non point sources and the application of soft technology Throughout the book more examples questions and problems have been included and several figures and tables have been added to better illustrate the text

Limnology in Australia P. de Deckker, W.D. Williams, 2012-12-06 Australia is the world's driest inhabited continent Water is our limiting resource It might therefore be thought that our water resources would be the subject of the most intensive study Certain aspects it must be conceded have received much attention notably the availability of water in terms of actual quantity The size of the surface water and the groundwater resource is well understood and indeed receives about as much study as can reasonably be expected in a country with as sparse a population and level of scientific manpower as ours Although the importance of understanding the water resource in terms of quantity is widely accepted what has not been generally appreciated is that for this resource to be available to human society for all the different uses to which it is put it is not sufficient that there exists within easy reach of the end users a certain total volume of water For that water to fulfil its functions for agriculture industry the home recreation biological conservation it must be in a certain state it must conform to certain chemical physical and biological criteria and what has not been sufficiently appreciated in Australian society is that the condition a water is in depends very much on the ecology of the waterbody in which it resides There are waterbodies in the world for example high altitude glacial lakes which are naturally so pristine that their water could be used for any purpose without treatment

State-of-the-Art in Ecological Modelling S. E. Jørgensen, 2013-10-22 State of the Art in Ecological Modelling covers the proceedings of the Conference on Ecological Modeling held in Copenhagen Denmark from August 28 to September 2 1978 The book focuses on ecological modeling particularly prey predator models lake and river models toxic substances models and holistic approaches to ecological modeling The selection first discusses review presentations of ecological modeling including river models prey predator models application of graphical methods and lake models The application of microcosms in ecological modeling water quality and irrigation in agriculture models and distribution and effect of toxic substances models are also elaborated The text then takes a look at the models of sea and coastal areas atmospheric pollution ecosystems in the lithosphere and water management The book surveys multi species of planktons and nutrients model of lake eutrophication and modeling of
