Friesner, 2004-03-24 Since the first attempts to model proteins on a computer began almost thirty years ago our understanding of protein structure and dynamics has dramatically increased Spectroscopic measurement techniques continue to improve in resolution and sensitivity allowing a wealth of information to be obtained with regard to the kinetics of protein folding and unfolding and complementing the detailed structural picture of the folded state Concurrently algorithms software and computational hardware have progressed to the point where both structural and kinetic problems may be studied with a fair degree of realism Despite these advances many major challenges remain in understanding protein folding at both the conceptual and practical levels Computational Methods for Protein Folding seeks to illuminate recent advances in computational modeling of protein folding in a way that will be useful to physicists chemists and chemical physicists Covering a broad spectrum of computational methods and practices culled from a variety of research fields the editors present a full range of models that together provide a thorough and current description of all aspects of protein folding A valuable resource for both students and professionals in the field the book will be of value both as a cutting edge overview of existing information and as a catalyst for inspiring new studies Computational Methods for Protein Folding is the 120th volume in the acclaimed series Advances in Chemical Physics a compilation of scholarly works dedicated to the dissemination of contemporary advances in chemical physics edited by Nobel Prize winner Ilya Prigogine      Quasiconvex Optimization and Location Theory J.A. dos Santos Gromicho, 2013-12-01 grams of which the objective is given by the ratio of a convex by a positive over a convex domain concave function As observed by Sniedovich Ref 102 103 most of the properties of fractional pro grams could be found in other programs given that the objective function could be written as a particular

composition of functions He called this new field C programming standing for composite concave programming In his seminal book on dynamic programming Ref 104 Sniedovich shows how the study of such compositions can help tackling non separable dynamic programs that otherwise would defeat solution Barros and Frenk Ref 9 developed a cutting plane algorithm capable of optimizing C programs More recently this algorithm has been used by Carrizosa and Plastria to solve a global optimization problem in facility location Ref 16 The distinction between global optimization problems Ref 54 and generalized convex problems can sometimes be hard to establish That is exactly the reason why so much effort has been placed into finding an exhaustive classification of the different weak forms of convexity establishing a new definition just to satisfy some desirable property in the most general way possible This book does not aim at all the subtleties of the different generalizations of convexity but concentrates on the most general of them all quasiconvex programming Chapter 5 shows clearly where the real difficulties appear

**Computational Science and Its Applications - ICCSA 2014** Beniamino Murgante, Sanjay Misra, Ana Maria Alves Coutinho Rocha, Carmelo Torre, Jorge Gustavo Rocha, Maria Irene Falcão, David Taniar, Bernady O. **Stochastic Approximation and Its Applications** Han-Fu Chen, 2005-12-30 Estimating unknown parameters based on observation data containing information about the parameters is ubiquitous in diverse areas of both theory and application For example in system identification the unknown system coefficients are estimated on the basis of input output data of the control system in adaptive control systems the adaptive control gain should be defined based on observation data in such a way that the gain asymptotically tends to the optimal one in blind channel identification the channel coefficients are estimated using the output data obtained at the receiver in signal processing the optimal weighting matrix is estimated on the basis of observations in pattern classification the parameters specifying the partition hyperplane are searched by learning and more examples may be added to this list All these parameter estimation problems can be transformed to a root seeking problem for an unknown function To see this let note the observation at time  $i$  i.e the information available about the unknown parameters at time  $i$  It can be assumed that the parameter under estimation denoted by  $\theta$  is a root of some unknown function This is not a restriction because for example  $f(\theta) = \sum_{i=1}^n (y_i - \phi(\theta, x_i))^2$  may serve as such a function

**Stochastic Global Optimization** Anatoly Zhigljavsky, Antanasz Zilinskas, 2007-11-20 This book aims to cover major methodological and theoretical developments in the field of stochastic global optimization This field includes global random search and methods based on probabilistic assumptions about the objective function We discuss the basic ideas lying behind the main algorithmic schemes formulate the most essential algorithms and outline the ways of their theoretical investigation We try to be mathematically precise and sound but at the same time we do not often delve deep into the mathematical detail referring instead to the corresponding literature We often do not consider the most general assumptions preferring instead simplicity of arguments For example we only consider continuous finite dimensional optimization despite the fact that some of the methods can easily be modified for discrete or in finite dimensional optimization problems The authors' interests and the availability of good surveys on particular topics have influenced the choice of material in the book For example there are excellent surveys on simulated annealing both on theoretical and implementation aspects of this method and evolutionary algorithms including genetic algorithms We thus devote much less attention to these topics than they merit concentrating instead on the issues which are not that well documented in literature We also spend more time discussing the most recent ideas which have been proposed in the last few years
