Conductive Polymers II R. H. Friend, 1993 This report explains the theory of polymer conductivity and discusses

developments in the synthesis of the major polymers A detailed section on practical applications follows a discussion of the improved electrical and mechanical properties and environmental stability which make such applications possible An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading

Modern Raman Spectroscopy Ewen Smith, Geoffrey Dent, 2013-03-15 This book reflects the dramatic increase in the number of Raman spectrometers being sold to and used by non expert practitioners It contains coverage of Resonance Raman and SERS two hot areas of Raman in a form suitable for the non expert Builds Raman theory up in stages without overloading the reader with complex theory Includes two chapters on instrumentation and interpretation that shows how Raman spectra can be obtained and interpreted Explains the potential of using Raman spectroscopy in a wide variety of applications Includes detailed but concise information and worked examples Conjugated Polymers J.L. Brédas, R. Silbey, 2012-12-06

Electronic Properties of Polymers and Related Compounds H. Kuzmany, M. Mehring, Siegm. Roth, 2012-12-06 At the International Winter School on Electronic Properties of Polymers and Related Compounds particular attention was paid to a very new and special field in polymer research It is concerned with the study of the electronic structure of polymers and with physical and chemical properties directly related to this structure In particular tutorial and research contributions on electrical electrochemical optical magnetic lattice dynamical and structural properties were presented In addition review reports on related topics such as charge transfer complexes and linear chain compounds transition metal trichalcogenides were included In two discussion meetings the special role of polyacetylene and possible present and future applications of the electronic properties of polymers as e.g. conductors or as electrodes in electrochemical cells were elucidated The electronic properties of polymers cover a wide range of research problems which are of particular interest for polymers with a 1D electron system Thus a great part of the work presented was concerned with conjugated systems Additional presentations dealt with other systems such as biopolymers photopolymers or electrets which are of significant scientific and technical importance It was demonstrated how their electronic properties are increasingly being investigated from a fundamental point of view by applying known concepts of solid state science
