Computer Applications in Food Technology R. Paul Singh, 1996-08-12

The Institute of Food Technologists (IFT) recently endorsed the use of computers in food science education. The minimum standards for degrees in food science as suggested by IFT require the students to use computers in the solution of problems, the collection and analysis of data, the control processes in addition to word processing. Because they are widely used in business, allow statistical and graphical representation of experimental data, and can mimic laboratory experimentation, spreadsheets provide an ideal tool for learning the important features of computers and programming. In addition, they are ideally suited for food science students who usually do not have an extensive mathematical background.

Drawing from the many courses he has taught at UC Davis, Dr. Singh covers the general basics of spreadsheets using examples specific to food science. He includes more than 50 solved problems drawn from key areas of food science, namely food microbiology, food chemistry, sensory evaluation, statistical quality control, and food engineering. Each problem is presented with the required equations and detailed steps necessary for programming the spreadsheet. Helpful hints in using the spreadsheets are also provided throughout the text.

Key Features: The first book to integrate spreadsheets in teaching food science and technology. Includes more than 50 solved examples of spreadsheet use in food science and engineering. Presents a step-by-step introduction to spreadsheet use. Provides a food composition database on a computer disk.

Tessellations: Mathematics, Art, and Recreation aims to present a comprehensive introduction to tessellations, tiling at a level accessible to non-specialists. Additionally, it covers techniques, tips, and templates to facilitate the creation of mathematical art based on tessellations. Inclusion of special topics like spiral tilings and tessellation metamorphoses allows the reader to explore beautiful and entertaining math and art. The book has a particular focus on Escheresque designs in which the individual tiles are recognizable real-world motifs. These are extremely popular with students and math hobbyists but are typically very challenging to execute. Techniques demonstrated in the book are aimed at making these designs more achievable. Going beyond planar designs, the book contains numerous nets of polyhedra and templates for applying Escheresque designs to them. Activities and worksheets are spread throughout the book, and examples of real-world tessellations are also provided.

Key features: Introduces the mathematics of tessellations, including symmetry. Covers polygonal aperiodic and non-Euclidean tilings. Contains tutorial content on designing and drawing Escheresque tessellations. Highlights numerous examples of tessellations in the real world. Activities for individuals or classes. Filled with templates to aid in creating Escheresque tessellations. Treats special topics like
