Information And Complexity In Statistical Modeling Information Science And Statistics:

Information and Complexity in Statistical Modeling Jorma Rissanen, 2007-12-15 No statistical model is true or false right or wrong the models just have varying performance which can be assessed The main theme in this book is to teach modeling based on the principle that the objective is to extract the information from data that can be learned with suggested classes of probability models The intuitive and fundamental concepts of complexity learnable information and noise are formalized which provides a firm information theoretic foundation for statistical modeling Inspired by Kolmogorov's structure function in the algorithmic theory of complexity this is accomplished by finding the shortest code length called the stochastic complexity with which the data can be encoded when advantage is taken of the models in a suggested class which amounts to the MDL Minimum Description Length principle The complexity in turn breaks up into the shortest code length for the optimal model in a set of models that can be optimally distinguished from the given data and the rest which defines noise as the incompressible part in the data without useful information Such a view of the modeling problem permits a unified treatment of any type of parameters their number and even their structure Since only optimally distinguished models are worthy of testing we get a logically sound and straightforward treatment of hypothesis testing in which for the first time the confidence in the test result can be assessed Although the prerequisites include only basic probability calculus and statistics a moderate level of mathematical proficiency would be beneficial The different and logically unassailable view of statistical modelling should provide excellent grounds for further research and suggest topics for graduate students in all fields of modern engineering including and not restricted to signal and image processing bioinformatics pattern recognition and machine learning to mention just a few Information Theoretic Learning Jose C. Principe, 2010-04-06 This book is the first cohesive treatment of ITL algorithms to adapt linear or nonlinear learning machines both in supervised and unsupervised paradigms It compares the performance of ITL algorithms with the second order counterparts in many applications

Algorithmic Probability and Friends. Bayesian Prediction and Artificial Intelligence David L. Dowe, 2013-10-22 Algorithmic probability and friends Proceedings of the Ray Solomonoff 85th memorial conference is a collection of original work and surveys The Solomonoff 85th memorial conference was held at Monash University's Clayton campus in Melbourne Australia as a tribute to pioneer Ray Solomonoff 1926 2009 honouring his various pioneering works most particularly his revolutionary insight in the early 1960s that the universality of Universal Turing Machines UTMs could be used for universal Bayesian prediction and artificial intelligence machine learning This work continues to increasingly influence and underpin statistics econometrics machine learning data mining inductive inference search algorithms data compression theories of general intelligence and philosophy of science and applications of these areas Ray not only envisioned this as the path to genuine artificial intelligence but also still in the 1960s anticipated stages of progress in machine intelligence which would ultimately lead to machines surpassing human intelligence Ray warned of the need to anticipate and discuss the potential consequences and dangers sooner rather than later Possibly foremostly Ray Solomonoff was a fine happy frugal and adventurous human being of gentle resolve who managed to fund himself while electing to conduct so much of his paradigm changing research outside of the university system The volume contains 35 papers pertaining to the abovementioned topics in tribute to Ray Solomonoff and his legacy
