Information, Place, and Cyberspace Donald G. Janelle, David C. Hodge, 2000-07-26 This book explores how new communication and information technologies combine with transportation to modify human spatial and temporal relationships in everyday life It targets the need to differentiate accessibility levels among a broad range of social groupings the need to study disparities in electronic accessibility and the need to investigate new measures and means of representing the geography of opportunity in the information age It explores how models based on physical notions of distance and connectivity are insufficient for understanding the new structures and behaviors that characterize current regional realities with examples drawn from Europe New Zealand and North America While traditional notions of accessibility and spatial interaction remain important information technologies are dramatically modifying and expanding the scope of these core geographical concepts

Knowledge, Complexity and Innovation Systems Manfred M. Fischer, Josef Fröhlich, 2013-11-27 In recent years there has been growing scientific interest in the triangular relationship between knowledge complexity and innovation systems The concept of innovation systems carries the idea that innovations do not originate as isolated discrete phenomena but are generated through the interaction of a number of actors or agents This set of actors and interactions possess certain specific characteristics that tend to remain over time Such characteristics are also shared by national regional sectoral and technological interaction systems They can all be represented as sets of institutional actors and interactions whose ultimate goal is the production and diffusion of knowledge The major theoretical and policy problem posed by these systems is that knowledge is generated not only by individuals and organisations but also by the often complex pattern of interaction between them To understand how organisations create new products new production techniques and new organisational forms is important An even more fundamental need is to understand how organisations create new knowledge if this knowledge creation lies in the mobilisation and conversion of tacit knowledge Although much has been written about the importance of knowledge in management little attention has been paid to how knowledge is created and how the knowledge creation process is managed

The third component of the research triangle concerns complexity

Growth Hormone And The Heart Andrea Giustina, 2000-11-30 Growth Hormone and the Heart endeavors to bring together knowledge that has been accumulated in the area of GH and the heart from basic to clinical studies by research groups working on this topic throughout the world Lessons from different experimental models and from several human diseases acromegaly adult GH deficiency heart failure suggest to endocrinologists and cardiologists that GH may not only have a role in the physiology and pathophysiology of heart function but that GH itself may have a place in the treatment of primary heart diseases such as dilated cardiomyopathy or of cardiac complications of hypopituitarism Growth Hormone and the Heart will be a useful update of the research produced in the field of cardiovascular endocrinology The Editors also hope that this book will serve as the primary step in the recognition of the wide physiological and clinical significance of GH and heart interactions

Theories of Endogenous Regional Growth Börje Johansson, Charlie Karlsson, Roger R. Stough, 2012-12-06 During the last two decades a new growth theory has emerged often labelled endogenous economic growth The contributions in the book develop these advances into a theoretical framework for endogenous regional economic growth and explain the implications for regional economic policies in the perspective of the new century Endogenous growth models can reflect increasing returns and hence refer more adequately to empirical observations than earlier models and the models become policy relevant because in endogenous growth models policy matters Such policies comprise efforts to stimulate the growth of knowledge intensity of the labour supply and knowledge production in the form of R D
