In Search of Certainty Mark Burgess,2015-04-09 Quite soon the world s information infrastructure is going to reach a level of scale and complexity that will force scientists and engineers to approach it in an entirely new way The familiar notions of command and control are being thwarted by realities of a faster denser world of communication where choice variety and indeterminism rule The myth of the machine that does exactly what we tell it has come to an end What makes us think we can rely on all this technology What keeps it together today and how might it work tomorrow Will we know how to build the next generation or will we be lulled into a stupor of dependence brought about by its conveniences In this book Mark Burgess focuses on the impact of computers and information on our modern infrastructure by taking you from the roots of science to the principles behind system operation and design To shape the future of technology we need to understand how it works or else what we don t understand will end up shaping us This book

explores this subject in three parts Part I Stability describes the fundamentals of predictability and why we have to give up the idea of control in its classical meaning Part II Certainty describes the science of what we can know when we don't control everything and how we make the best of life with only imperfect information Part III Promises explains how the concepts of stability and certainty may be combined to approach information infrastructure as a new kind of virtual material restoring a continuity to human computer systems so that society can rely on them

Emerging Anti-cancer Compounds and Immunomodulators for Pancreatic Cancer Treatment Stephen Safe, Jennifer M. Bailey-Lundberg, Kathleen E. DelGiorno, 2024-04-29 Pancreatic

cancer is a highly lethal gastrointestinal disease that is becoming one of the leading causes of cancer mortality worldwide. Despite advances in surgery, radiation therapy, immuno oncology and therapeutics, the 5 year survival rate for pancreatic cancer patients remains around 12%. The poor prognosis is mainly due to late diagnosis as pancreatic cancer patients commonly don't exhibit symptoms until an advanced stage that is beyond surgical resection. Currently, the main treatments for patients with advanced pancreatic cancer are chemotherapy, radiotherapy, and most recent clinical trials incorporate immunotherapy.
