INTEMPERISMO O METEORIZACION

GONZALO DUQUE ESCOBAR

A la Universidad Nacional de Colombia en sus 150 años.

Intemperismo o meteorización es la alteración de los materiales rocosos expuestos al aire, a la humedad y al efecto de la materia orgánica; puede ser intemperismo mecánico o de desintegración, y químico o de descomposición, pero ambos procesos, por regla general interactúan. Las variaciones de humedad y temperatura inciden en ambas formas de intemperismo toda vez que afectan la roca desde el punto de vista mecánico y que el agua y el calor favorecen las reacciones químicas que la alteran.

Distintos factores ambientales físicos y químicos atacan a las rocas y las cuartean, disgregan y descomponen, y según el carácter de los factores que produzcan la meteorización se distinguen la meteorización física y la meteorización química.

8.1. PROCESOS EXTERNOS

Estos procesos comprenden la meteorización, erosión, transporte y deposición. Para el transporte la energía potencial que provee la gravedad se transforma en cinética. Otra fuente de energía es el Sol responsable del movimiento del aire y formación de lluvias. A la denudación o acción niveladora se oponen otras fuerzas internas que emergen los continentes. Los continentes pierden un metro de espesor de sus tierras emergidas cada 30.000 años, pues un medio de transporte como el agua, lleva materiales por los ríos al mar.
