Halophiles Biodiversity And Sustainable Exploitation Sustainable Development And Biodiversity:

Halophiles Dinesh K Maheshwari, Meenu Saraf, 2015-09-16 The world of halophiles is quite diverse and their representatives in three domains of life i.e. archaea, bacteria and eukarya. They are found all over the small subunit rRNA based tree of life and these microorganisms are adapted to salt concentration up to saturation hence able to grow at 300g l NaCl concentration. Their metabolic diversity is high as well encompassing oxygenic and anoxygenic phototrophs, aerobic heterotrophs, denitrifiers, sulphate reducers, fermenters and methanogens. The proteins of halophiles are magnificently engineered to function in a milieu containing 2.5M salt that encodes genes represent a valuable repository and resource for reconstruction and visualizing processes of habitat selection and adaptive evolution. Search for new enzymes endowed with novel activities and enhanced stability continues to be desirable purpose for important commercial production of biotechnological significance. These poly extremophiles proved excellent source of enzymes and metabolites possessing inherent ability to function in extreme conditions of high salt, alkaline pH and facilitating catalysis for industrial application in food processing, industrial bioconversion, bioremediation etc. In fact it has just begun to realize the great potential and true extent of diversity and suitable applications if explored them judiciously. This book highlights current applications and research on halophiles to provide a timely overview. Chapters are written by expert authors from around the world and include topics of varied importance which include their role to play in enzyme production, restoration of soil fertility and plant growth, antimicrobial and biocatalytic potential, biomolecules in nanotechnology and aspects of quorum sensing. The book is divided into three sections dealing with biodiversity, biotechnology and sustainable exploitation of halophiles. This major new work represents a valuable source of information to all those scientists interested in microorganisms in general and extremophiles in particular with respect to their innovative products and applications.

Fungi in Extreme Environments: Ecological Role and Biotechnological Significance Sonia M. Tiquia-Arashiro,Martin Grube,2019-07-22

Over the last decades scientists have been intrigued by the fascinating organisms that inhabit extreme environments. These organisms, known as extremophiles, thrive in habitats which for other terrestrial life forms are intolerably hostile or even lethal. Based on such technological advances, the study of extremophiles has provided over the last few years ground-breaking discoveries that challenge the paradigms of modern biology. In the new bioeconomy, fungi in general play a very important role in addressing major global challenges, being instrumental for improved resource efficiency, making renewable substitutes for products from fossil resources, upgrading waste streams to valuable food and feed ingredients, counteracting life-style diseases and antibiotic resistance through strengthening the gut biota, making crop plants more robust to survive climate change conditions, and functioning as host organisms for production of new biological drugs. This range of new uses of fungi all stand on the shoulders of the efforts of mycologists over generations. The book is organized in five parts: I Biodiversity Ecology Genetics and Physiology of Extremophilic Fungi; II Biosynthesis of Novel Biomolecules and Extremozymes; III Bioenergy and Biofuel synthesis; and IV Wastewater and biosolids treatment and V Bioremediation.

Microbiomes of Extreme Environments Ajar Nath Yadav, Ali Asghar Rastegari, Neelam Yadav, 2021-03-21. The extreme microbiomes are those microorganisms thriving under extreme conditions where no other living being will have any chance to survive. The extreme habitats are those presenting high temperatures (thermophiles), low temperature (psychrophiles), hypersaline environments (halophiles), low and high pH (acidophiles, alkaliphiles), high pressure (piezophiles), etc. They are distributed worldwide. The extreme habitats have proved to offer a unique reservoir of genetic diversity and biological source of extremophiles. The extremophilic microbial diversity and their biotechnological potential use in agricultural and industrial applications will be a milestone for future needs. Extremophiles and their cell components therefore are expected to play an important role in the chemical, food, pharmaceutical, paper and textile industries as well as environmental biotechnology.

Microorganisms Resilience to Climate Change Piyush Pandey, Shrivardhan Dheeman, Dinesh K. Maheshwari, 2025-05-17. This book covers a wide range of topics such as role of microorganisms in the global carbon cycle, the impact of climate change on microbial communities, and the feedback mechanism between them. Microorganisms produce and consume greenhouse gases to transform essential elements such as carbon and nitrogen to form their cellular components. Microorganisms are also involved in nitrogen and phosphorus cycling, which are essential for plant growth and productivity. Thus, the role of microbial communities in agroecosystems with biogeochemical cycles is imperative for addressing the current global warming situation. Microorganisms are highly sensitive to changes in environmental conditions such as temperature, moisture, and nutrient availability. As the climate continues to change, shifts in microbial community structure and function may have significant consequences for ecosystem services such as nutrient cycling, water purification, and carbon sequestration. In this book, experts from a range of fields such as microbiology, ecology, biogeochemistry, and climate science come together to provide a holistic perspective on the role of microorganisms in climate change. This book is of reference to policymakers, educators,

researchers and students working in the field of microbiology and climate sciences **Current Trends in Microbial Biotechnology for Sustainable Agriculture** Ajar Nath Yadav, Joginder Singh, Chhatarpal Singh, Neelam Yadav, 2020-11-10

Microbial biotechnology is an emerging field with applications in a broad range of sectors involving food security human nutrition plant protection and overall basic research in the agricultural sciences The environment has been sustaining the burden of mankind from time immemorial and our indiscriminate use of its resources has led to the degradation of the climate loss of soil fertility and the need for sustainable strategies The major focus in the coming decades will be on achieving a green and clean environment by utilizing soil and plant associated beneficial microbial communities Plant microbe interactions include the association of microbes with plant systems epiphytic endophytic and rhizospheric The microbes associated with plant ecosystems play an important role in plant growth development and soil health Moreover soil and plant microbiomes help to promote plant growth either directly or indirectly by means of plant growth promoting mechanisms e g the release of plant growth regulators solubilization of phosphorus potassium and zinc biological nitrogen fixation or by producing siderophores ammonia HCN and other secondary metabolites These beneficial microbial communities represent a novel and promising solution for agro environmental sustainability by providing biofertilizers bioprotectants and biostimulants in addition to mitigating various types of abiotic stress in plants This book focuses on plant microbe interactions the biodiversity of soil and plant microbiomes and their role in plant growth and soil health Accordingly it will be immensely useful to readers working in the biological sciences especially microbiologists biochemists and microbial biotechnologists Yellowstone Science ,1997 **13th International Congress on Extremophiles: From**

Extremophilic Biomolecules and Microorganisms to Biotechnological and Sustainable Applications Isaac Cann ,Melina Kerou, Simone Antonio De Rose ,Mohea Couturier, 2024-05-23 Extremophiles have been studied for many decades these microorganisms can thrive under a vast range of conditions including extreme temperature pH pressure radiation salinity energy and nutrient limitation Life in extreme environments has evolved to render solutions that overcome the challenges presented by such conditions Among these solutions include extremozymes and extremolytes an invaluable collection of natural renewable and biological resources with immense potential for applications aimed at the development of a sustainable bio economy especially in biotechnology and other industrial sectors In line with this observation extremophilic DNA polymerases have been instrumental in driving unprecedented progress in recombinant DNA technologies applied in diverse areas including agriculture and human health Thermostable and halotolerant enzymes are likely to feature significantly in the renewable energy sector of the future including bioethanol production and the Gas to Liquid effort which aims at converting greenhouse gases such as CO₂ and methane to liquid fuels Furthermore due to the stability of extremophilic protein homologs insights to the structure and function of protein protein complexes including those critical to protein degradation were solved to advance our understanding of fundamental processes across the three domains of life

 climate milieu as an empirical evidence of Bio rights of commons at community ecosystem interface for sustainable
 intensification of nature s goods and services Bio rights is a right based neo economic conservation paradigm that
 compensates the opportunity costs incurred in conservation efforts by the marginal communities living near globally
 important ecosystems and dependent on it for their livelihood through payments from environment services The book would
 bring forth the true value of circular economic interventions in socio ecological conservation shaped through sustainable
 human interactions with nature This multilevel study of conservation science serves an interdisciplinary academia consistent
 with conventions on climate change bio diversity and sustainable development to establish links between conservation
